CHAIR SCHILTZ: Good morning, everyone. We'll get the hearing started. I want to introduce myself. My name is Patrick Schiltz. I'm a federal judge in Minneapolis, where it was 35 below zero wind chill this morning when I left my home, which reminds me that this meeting was supposed to be in Miami, but, instead, we're doing it this way. I'm sorry we couldn't meet in person, but, obviously, with the Omicron variant, we wanted to keep everybody safe.

We are here today to have a hearing on several amendments that we have proposed to the Federal Rules of Evidence, an amendment to Rule 106 regarding the Rule of Completion, an amendment to Rule 615 regarding the exclusion of witnesses from the courtroom, and an amendment to Rule 702 regarding expert testimony.

The way I'd like to do this today is I'd like to ask everybody to keep their videos and their microphones off. We have, like, 60 or 70 people participating today, so if you could all keep your videos and your microphones off, except for Professor Capra and me and whoever's doing the speaking at the time.

1           For you speakers, when I call your name, if  
2 you could turn on your video and your microphone,  
3 obviously, we'd like to see and hear from you at that  
4 point. And then, as to the Committee members, if you  
5 have any questions or you want to make a comment about  
6 something that a speaker has said, turn your video on,  
7 and when I see your face pop up on my screen, I'll  
8 know that you're waiting to ask a question or to make  
9 a comment, and I'll call on you at the appropriate  
10 time. So, unless you're actually speaking, please  
11 keep your microphones and your videos off.

12           Just a couple more ground rules. The  
13 hearing will be recorded by the Administrative Office.  
14 If any of you are disconnected, please use the  
15 original meeting link to rejoin the hearing. If that  
16 doesn't work, you can use the conference bridge number  
17 to join by audio, or you can email Brittany Bunting at  
18 the Administrative Office and she can help you rejoin  
19 the meeting.

20           As I mentioned, we have a lot of people  
21 participating today. We have about two dozen people  
22 who want to speak today, so we ask that you all limit  
23 yourself to no more than five minutes each. I think  
24 most or all of you have submitted written comments,  
25 and we will read those comments very carefully.

1 Please don't try to summarize all of your comments in  
2 your five minutes. Just, if you could, just emphasize  
3 a couple of the highlights, and please respect the  
4 time limits so that we can hear from everybody today.

5 So, with that, I'm going to call on the  
6 first speaker, and let's see, Mr. Burrell, you may  
7 have missed it, but if you could keep your video off,  
8 please, until it's your time to speak. I'll call on  
9 you at that time. Thank you.

10 The first speaker is Rebecca Bazan. Ms.  
11 Bazan or Bazan, I don't know how to pronounce it.  
12 There you are. How do you pronounce your last name?

13 MS. BAZAN: Bazan. You got it right the  
14 first time.

15 CHAIR SCHILTZ: Got it right the first time.  
16 So I'm batting 100 so far. If you could just  
17 introduce yourself and then we'd be happy to hear  
18 whatever you'd like to say.

19 MS. BAZAN: Good morning, and thank you to  
20 the Committee for allowing me to testify today. My  
21 name is Rebecca Bazan, and I'm a litigation partner in  
22 the Washington, D.C., office of Duane Morris LLP.  
23 Duane Morris submitted a written comment in support of  
24 the proposed changes to Federal Rule of Evidence 702,  
25 and our comment and my testimony today will focus on

1 the practical implications of the proposed rule  
2 changes, particularly how they could affect product  
3 liability cases.

4 Duane Morris frequently litigates product  
5 liability cases, especially in the life sciences and  
6 toxic tort areas, for which expert testimony is often  
7 crucial. First, I want to mention some problematic  
8 trends that we've observed in product liability cases  
9 when Rule 702 has been misapplied and then discuss how  
10 adoption of the proposed changes could help remedy  
11 those problems.

12 What we often see when Rule 702 is  
13 misapplied is that speculative and unreliable expert  
14 testimony is deemed admissible and what should be  
15 fatal flaws are left to cross-examination at trial and  
16 passed on to the finder of fact to make a credibility  
17 determination. So, in other words, a judge may say,  
18 sure, there's problems with this expert, but they go  
19 to the weight, not the admissibility. And what that  
20 means is that a lot of what should be inadmissible  
21 expert testimony gets presented to juries.

22 One place where we see this happen a lot in  
23 the product liability context is on the issue of  
24 causation. Oftentimes, evidence of general causation  
25 is scant, but an expert is permitted to leap to

1 specific causation or the expert is permitted to  
2 conflate risk and causation. So, for example,  
3 exposure to a chemical may present a risk of cancer  
4 and, therefore, a proffered expert might opine that a  
5 particular person's cancer was caused by exposure to  
6 that chemical without looking at dose, epidemiology,  
7 what specific type of cancer is involved, or other  
8 important specific causation determinants.

9 We've also encountered engineering experts  
10 in medical device cases attempting to support design  
11 defect claims with general design criticisms of an  
12 entire category of products without any consideration  
13 of the specific product or design at issue.

14 We've also seen pathologists attempting to  
15 offer specific causation opinions based on general  
16 examples of adverse tissue reactions to certain  
17 materials without actually reviewing a particular  
18 plaintiff's pathology slides.

19 Another problematic trend we've observed is  
20 experts being allowed to testify outside of their  
21 fields. Sometimes, in an effort to save costs,  
22 litigants will present expert testimony from a single  
23 witness in several different fields, including fields  
24 outside of a witness's true expertise, and juries can  
25 be ill-equipped sometimes to determine an expert's

1 credentials in a single field, let alone multiple  
2 fields, and the mere appearance of expertise in one  
3 field can lead credibility to testimony in others,  
4 exposing juries to prejudicial testimony by a witness  
5 with little or no expertise at all.

6           And allowing expert testimony like this to  
7 get to the jury distracts and can confuse the jury and  
8 de-emphasize the substantive issues in the case, and  
9 that has ripple effects backwards through the life  
10 cycle of a case. If litigants know that there's a  
11 strong likelihood that they can get to the jury with  
12 very weak experts, they're more inclined to file  
13 weaker and more speculative cases than if they were  
14 put to the task of demonstrating all aspects of expert  
15 admissibility by a preponderance of the evidence. And  
16 it also incentivizes some litigants to merely attempt  
17 to survive summary judgment by presenting passable  
18 expert testimony for the lowest possible cost in the  
19 hopes of drastically increasing the settlement value  
20 of a case before trial. So this type of gamesmanship  
21 prolongs a case and improperly inflates settlements.

22           So how the proposed changes will help, they  
23 reaffirm the trial court's gate-keeping function by  
24 clarifying that proponents of experts bear the burden  
25 of establishing the four prongs of expert

1 admissibility by a preponderance of the evidence.

2           What this means in practice is that more  
3 inadmissible expert testimony will be excluded before  
4 trial and it will increase the quality of expert  
5 testimony that's ultimately presented to the jury.  
6 This would benefit courts, juries, and litigants by,  
7 number one, cutting down on the number of very weak or  
8 speculative cases that are filed to begin with. This  
9 would help federal courts manage their dockets,  
10 especially as to multi-district litigations, which  
11 make up more than 50 percent of the federal docket and  
12 many, if most, require expert testimony.

13           Number two, it will result in more accurate  
14 settlement assessments pretrial because they'll no  
15 longer be inflated and propped up by very weak  
16 experts.

17           And, number three, it will streamline the  
18 issues that actually make it to trial and cut down on  
19 jury confusion by minimizing exposure to speculative  
20 or unreliable expert testimony. So we therefore  
21 support the proposed changes, and I thank the  
22 Committee for its time and consideration of this  
23 testimony and our written comment.

24           CHAIR SCHILTZ: All right. Thank you, Ms.  
25 Bazan.

1 MS. BAZAN: Thank you.

2 CHAIR SCHILTZ: Do any Committee members  
3 have any questions or any comments?

4 (No response.)

5 CHAIR SCHILTZ: All right. Seeing none,  
6 thank you again, Ms. Bazan.

7 MS. BAZAN: Thank you very much.

8 CHAIR SCHILTZ: Next, we'd like to hear from  
9 Douglas Burrell or Burrell. Mr. Burrell, I hope I  
10 didn't mispronounce your name.

11 MR. BURRELL: Well, you did it right, it's  
12 Burrell. Thank you.

13 CHAIR SCHILTZ: All right.

14 MR. BURRELL: First of all, I thank you,  
15 Committee, for agreeing to listen to my comments here  
16 today. I am an attorney in Atlanta, Georgia, with  
17 Drew Eckl & Farnham, and I am the current president of  
18 DRI, Lawyers Representing Business.

19 Myself and two of my DRI colleagues will be  
20 testifying today. As background information, DRI is  
21 and has been the leading U.S. organization of civil  
22 defense attorneys and in-house counsel for more than  
23 60 years. DRI hosts 29 substantive practice group  
24 committees and is home to the Center for Law and  
25 Public Policy.

1           The Center is the national policy arm of  
2           DRI. It acts as a think tank and serves as the public  
3           face of DRI, undertaking in-depth studies and  
4           publishing scholarly works on a variety of issues,  
5           including changes to the Federal Rules of Civil  
6           Procedure and the Federal Rules of Evidence. The  
7           Center strongly supports the amendment of Federal Rule  
8           of Evidence 702 as currently proposed, and it  
9           appreciates the Advisory Committee taking on this  
10          task. And DRI has submitted its comments as well.

11           I am here to speak in support of expressly  
12          stating in Rule 702 (d) that admissibility requires  
13          that the expert's opinion reflects a reliable  
14          application of the principles and methods of the facts  
15          of the case. This is necessary because many decisions  
16          entirely turn over the determination of reliability to  
17          the jury even though Federal Rule of Evidence 702  
18          intends that the court will be the gatekeeper of  
19          reliability.

20           The current committee note from the 2000  
21          amendment of Rule 702 states, "The amendment  
22          specifically provides that the trial court must  
23          scrutinize not only the principles and methods used by  
24          the expert but also whether those principles and  
25          methods have been properly applied to the facts of the

1 case."

2 As the Court noted in In re Paoli RR Yard  
3 PCB, 35 F.3d 717, 745 (3rd Cir. 1994), "Any step that  
4 renders the analysis unreliable renders the expert's  
5 testimony inadmissible." This is true whether the  
6 step completely changes a reliable methodology or  
7 merely misapplies that methodology. Unfortunately the  
8 two did not prove sufficient.

9 For instance, the 2018 MDL ruling in In re  
10 C.R. Bard, Inc. expressly disregarded reliability of  
11 the expert's conclusion as not a subject for gate-  
12 keeping. Rather than pay attention to the committee  
13 note from 2000, that MDL court cited a 20-year-old  
14 1998 decision that is contrary to the intent of the  
15 2000 amendment. Our objective at this time is to  
16 amend Rule 702 in ways that cannot be ignored so that  
17 its intent is routinely applied instead of being  
18 regularly disregarded.

19 As part of the diminishing gate-keeping  
20 employed by the courts, the statement is made that  
21 there is a presumption in favor of admitting expert  
22 testimony, which is not correct because there is no  
23 presumption. The draft committee note now says,  
24 "Unfortunately, some courts have required the expert's  
25 testimony to appreciably help the trier of fact."

1 Applying a higher standard than helpfulness to  
2 otherwise reliable expert testimony is unnecessarily  
3 strict.

4 We are asking that the proposed note go on  
5 to say Rule 702 favors neither admission nor exclusion  
6 of evidence but rather states the process for  
7 determining admissibility. Prior decisions that  
8 stated either a heightened burden of admissibility or  
9 a presumption in favor of admissibility are not  
10 consistent with Rule 702. This addition neutrally  
11 balances out erroneous rulings that either favor or  
12 disfavor the admission of expert evidence.

13 I would like to thank you for your time and,  
14 as I stated before, two other of my DRI colleagues  
15 will be testifying to this Committee later.

16 CHAIR SCHILTZ: All right. Thank you, Mr.  
17 Burrell.

18 Any Committee members have any questions or  
19 comments?

20 (No response.)

21 CHAIR SCHILTZ: All right. Thank you again,  
22 Mr. Burrell.

23 Next, Mr. Coben?

24 MR. COBEN: Yes.

25 CHAIR SCHILTZ: Good morning, sir. If you

1 could introduce yourself, please.

2 MR. COBEN: Sure. Good morning. My name is  
3 Larry Coben, and I'm providing this testimony  
4 regarding some comments and changes that were proposed  
5 to Rule 702 in my capacity both as a trial lawyer and  
6 as chief counsel for the Attorneys' Information  
7 Exchange Group. AIEG is a nonprofit organization of  
8 over 800 civil litigators who work throughout the  
9 United States representing thousands of consumers who  
10 unfortunately suffer serious injury as a result of the  
11 design or manufacturing flaws in products.

12 These lawsuits almost always require direct  
13 analysis by competent experts in a host of scientific  
14 fields. We do this with an understanding and an  
15 appreciation of the requirements of Rule 702 and have  
16 uniformly found that as it currently exists and as it  
17 is applied across the United States, Rule 702 provides  
18 appropriate criteria and boundaries, affording jurors  
19 an opportunity to decide civil disputes with reasoned  
20 opinion evidence.

21 Support for this suggested rule change  
22 language, as I understand it, has been based on  
23 criticism of how some trial courts have applied Rule  
24 702. In our view, this criticism is substantively and  
25 procedurally misplaced. The comment that the

1 preponderance of the evidence should be added because  
2 some decisions have failed to mention this criteria of  
3 proof, frankly, is itself an opinion that does not  
4 meet 702.

5 Trial judges routinely apply this well-  
6 recognized requirement every day they are confronted  
7 with expert testimony, and its application does not  
8 demand a restatement of that preponderance rule in  
9 each published opinion. In our view, adding  
10 preponderance of the evidence language to Rule 702,  
11 which is equivalent to showing something is more  
12 likely than not, is neither necessary and, in fact,  
13 it's a misnomer.

14 If any new phraseology must be added, and we  
15 think not, it should be the preponderance of the  
16 information because experts can rely upon and refer to  
17 all sorts of information to formulate opinions. They  
18 are not limited to admissible evidence. We think,  
19 therefore, that this phrase is in conflict with Rule  
20 703, allowing the use of non-admissible evidence. We  
21 are more concerned that some may think that this rule  
22 change compels an analysis of whether an expert's  
23 proffered opinion satisfies a party's burden of proof.  
24 That would be a mistake. You see, our courts have not  
25 had any problem distinguishing between a party's

1 substantive burden of proof and what is required of an  
2 expert before allowing her testimony.

3 But we fear this distinction will be lost  
4 now. It is critical that the Committee recognize that  
5 expert testimony is an essential element in civil  
6 litigation which needs to be protected against  
7 unwarranted challenges, which, for the most part,  
8 frankly, are contrived rather than real.

9 As counsel to plaintiffs in trials involving  
10 product liability design and manufacturing defects,  
11 substantive state law requires that consumer victims  
12 proffer expert testimony related to issues of  
13 alternative design, design defect, and proximate  
14 causation. Invariably, the burden of proof dictates  
15 the use of experts, and, routinely, our colleagues on  
16 the defense bar challenge expertise or methodology,  
17 our witnesses, despite the fact that the defense has  
18 disclosed experts with similar qualifications and  
19 using similar methodology.

20 Given these competing arguments, it's not  
21 surprising that the filed commentary has aligned the  
22 proponents and opponents to these perverse changes  
23 along litigation lines. Why do we have lineup of  
24 support and opposition to these changes if they are  
25 only meant to remind courts of the existing standard?

1 In truth, whenever changes in procedural or  
2 evidentiary rules are obtained, the wordsmithing  
3 ensures an avalanche of new legal arguments which will  
4 undoubtedly precipitate more litigation.

5 Adding this phraseology, in our view, will  
6 have the opinion of causing some judges to think a  
7 change of substance has happened, now requiring, for  
8 instance, the trial court to find that the opinion is  
9 more likely correct than not or that the trial court  
10 must find that the methodology used is more likely the  
11 correct methodology than the methodology chosen by a  
12 party's opponent, or that the trial court must find  
13 that the facts or data considered in reaching an  
14 opinion are more likely than not.

15 Each of these potential constructions of  
16 this semantical change would have the effect of hugely  
17 altering a proponent's burden of proof and would  
18 convert the trial judge into a thirteenth juror. We  
19 do not believe that this change is necessary, and we  
20 believe it will simply promote additional litigation  
21 and argument and burden our courts. Thank you very  
22 much for allowing me to make these comments. And, of  
23 course, we've submitted written comments as well.

24 CHAIR SCHILTZ: Thank you. Thank you for  
25 appearing.

1                   Do any Committee members have any comments  
2 or questions?

3                   (No response.)

4                   CHAIR SCHILTZ: All right. Hearing none,  
5 thank you again, Mr. Coben.

6                   MR. COBEN: You're welcome.

7                   CHAIR SCHILTZ: Next is Alex Dahl.

8                   MR. DAHL: Thank you, Your Honor, and good  
9 morning.

10                  CHAIR SCHILTZ: Good morning.

11                  MR. DAHL: Thank you for allowing me to  
12 testify before the Committee on behalf of Lawyers for  
13 Civil Justice, which supports the Committee's Rule 702  
14 amendment. LCJ's comments and research demonstrate  
15 that there is a widespread misunderstanding of the  
16 rule's requirements. We have two recommendations for  
17 improving the proposal, reflecting both what the  
18 proposal is meant to do—clarify date-keeping  
19 requirements—and what it is meant to undo, which is  
20 reliance on the misunderstanding that there's a  
21 presumption in favor of admissibility and that  
22 questions about sufficiency go to weight rather than  
23 admissibility.

24                  The undoing part is hard because these  
25 misunderstandings are deeply ingrained in case law and

1 legal culture. You may be familiar with Michael  
2 Lewis's book, *The Undoing Project*, which describes the  
3 famous collaboration between Amos Tversky and Daniel  
4 Kahneman. What they were undoing is ingrained ways or  
5 habits of thinking. Their fundamental insight is that  
6 people who have a set idea or a viewpoint tend to  
7 downplay or ignore information that's inconsistent  
8 with it and instead look for information that supports  
9 it.

10           The book recounts Tversky's advice to Delta  
11 Airlines: you're not going to educate experienced  
12 pilots out of making mistakes, but you can greatly  
13 reduce accidents by training people to communicate in  
14 a way that gets the captain's attention when they're  
15 trying to help avoid the problem. Many judges and  
16 lawyers will look at an amendment that purports to  
17 clarify rather than change Rule 702 and see it as not  
18 changing anything. Opponents of Rule 702 standards  
19 will make this argument in court, and, in fact, you  
20 might hear some of that today.

21           It's important that the amendment get the  
22 reader's attention about two fundamental problems.  
23 First, the rule should state expressly that the court,  
24 not the jury, decides admissibility. Adding the  
25 phrase "preponderance of evidence" is a good and

1 helpful and necessary addition and it does mean that  
2 the court decides, but it relies on the reader to draw  
3 the inference that the court decides. There's a gap  
4 between what the amendment means and what it says, and  
5 that difference will invite continued misunderstanding  
6 and litigation.

7           Our second recommendation is to make clearer  
8 that the amendment rejects the case law that's  
9 inconsistent with the rule. This is important because  
10 the very reason people will read the note will be to  
11 figure out what to do when the rule and the prevailing  
12 case law disagree. At the recent standing committee  
13 meeting, it was perceived that the suggestion to give  
14 guidance about the case law was based on a desire for  
15 scolding judges who have gotten it wrong. LCJ  
16 strongly agrees with those who said the note should  
17 not be used for that purpose. In fact, we see it the  
18 very opposite.

19           As scolding means rebuking people for past  
20 error, the opposite is helping people to avoid  
21 mistakes in the future. The note should assume that  
22 its readers want to get it right, and the best way to  
23 help those people is clarity. The proposed note says  
24 these rulings are an incorrect application. That's  
25 somewhat helpful, but it's not enough. It fails to

1       communicate that you'll get it wrong if you follow  
2       those cases. Restoring the draft language "this  
3       amendment rejects those holdings" is more likely to  
4       get the readers' attention. And even more effective  
5       would be expressly identifying the lines of cases that  
6       will lead readers to make yet another misstatement of  
7       the standards, and the three most commonly cited of  
8       those are Loudermill, Viterbo, and Smith.

9               In closing, the proposed amendment is  
10       important for both what it needs to do—clarify the  
11       gate-keeping standards—and for what it needs to undo:  
12       the misunderstandings about those standards. The  
13       undoing part of that is much harder because those  
14       misunderstandings are deeply ingrained and people will  
15       automatically look to the amendment for confirmation  
16       of their current thinking rather than for a challenge  
17       to it. Future judges and lawyers are going to turn to  
18       the rule and note when they need guidance on what to  
19       do when the rule is inconsistent with the case law, so  
20       the text of the rule and the note should make it as  
21       easy as possible for them to get it right. Thank you.

22               CHAIR SCHILTZ: Thank you.

23               Do any Committee members have any questions  
24       or comments?

25               (No response.)

1           CHAIR SCHILTZ: All right. Seeing none,  
2 thank you again, Mr. Dahl.

3           Next, we'll turn to Gardner Duvall.

4           MR. DUVAL: Thank you very much for this  
5 opportunity to speak. I have been trying civil cases  
6 for 35 years in state and federal courts, and I am the  
7 chair of the Legislation and Rules Committee of the  
8 DRI Center for Public Policy. What I want to do today  
9 is speak in some brief rebuttal to some oppositions to  
10 amending Rule 702, and those oppositions say that the  
11 rule is being applied as intended when, very often, it  
12 is not.

13           The comment that we submitted focuses on  
14 cases that in approach or in outcome vary from the  
15 current Rule 702 and the committee note to it. These  
16 are cases that exemplify and refute the claim that 702  
17 is being applied as intended. So, for instance, in  
18 2014, the Ninth Circuit in the City of Pomona case  
19 rejected the statement that, "[A]ny step that renders  
20 the analysis unreliable renders the expert's testimony  
21 inadmissible. This is true whether the step  
22 completely changes a reliable methodology or merely  
23 misapplies that methodology."

24           That statement, however, is quoted in the  
25 committee note for the 2000 amendment from In re

1 Paoli. The Ninth Circuit expressly says that it has a  
2 standard that's different from what other circuits  
3 have and it's different from what was expressly  
4 intended when Rule 702 was amended in 2000.

5 Another case that I think is important as an  
6 example here is the case of Johnson v. Mead Johnson in  
7 the Eighth Circuit in 2014. When you look at the  
8 district court decision in the case, the trial court  
9 expressly walked through the steps that are laid out  
10 in Rule 702 to determine whether or not the evidence  
11 was admissible and reliable, and he found that that  
12 particular evidence was not. And in the appeal, the  
13 Eighth Circuit looked at that and they did not go  
14 through step by step the elements of Rule 702 the way  
15 that the trial court had done, and, instead, what the  
16 court said was, well, it's a differential diagnosis  
17 and we accept differential diagnosis and so it's  
18 admissible testimony.

19 And I don't ask anyone to relitigate which  
20 of those courts got the admissibility correct. I  
21 don't think that's a useful process at all, but what  
22 is important is that there's a judicial process that  
23 702 sets out, and that is to say there are four  
24 elements that the proponent has to prove and it really  
25 should be a checklist. It's a process. It's a

1 method. And that's what the district court did. And,  
2 on appeal, it was reversed by an appellate court that  
3 didn't go through any of those things, did not apply  
4 what the rule intends to be a method, and it  
5 exemplifies where things are going wrong.

6 In fact, the Eighth Circuit's decision there  
7 was very much like a Frye ruling that said this is an  
8 acceptable technique and, therefore, this is  
9 admissible evidence and that's the beginning and the  
10 end of the analysis. We, in our comment, and many  
11 others have noted that a large number of decisions  
12 after the year 2000 and up to the present really cite  
13 back to cases that predate the Rule's 2000 amendment,  
14 and, thereby, they undermine what was intended when  
15 the amendment was last made.

16 These decisions often brush off the  
17 reliability standard that was added in Rule 702(d) and  
18 say that reliability is for juries and not for the  
19 court. So the record in this proceeding is replete  
20 with citations that Rule 702 is not being applied  
21 consistently among the circuits and it is not being  
22 applied as intended. This Committee has identified a  
23 failure in judicial process that passes to juries the  
24 role of the judge in considering what is often  
25 critical and challenging evidence. And, therefore, we

1 encourage you to move forward with your amendments to  
2 Rule 702 and also with the proposed changes to those  
3 that were submitted in the comment by DRI and its  
4 Center for Public Policy. I want to thank you very  
5 much for your time and for listening to me today.

6 CHAIR SCHILTZ: Thank you. Thank you, Mr.  
7 Duvall.

8 Any Committee members have any comments or  
9 questions?

10 (No response.)

11 CHAIR SCHILTZ: All right. Thank you again.  
12 Next, we'll go to Ronni Fuchs.

13 MS. FUCHS: Yes. Thank you. Thank you for  
14 allowing me to address the Committee today. My name  
15 is Ronni Fuchs. I'm a partner at Troutman Pepper,  
16 which is a national law firm. For about 30 years,  
17 I've been representing clients in product liability  
18 and mass tort cases and largely focusing on expert  
19 testimony and Rule 702, so I've observed firsthand the  
20 misunderstanding, as many others have explained, of  
21 the rule that leads to disparate decision-making and  
22 the effect on litigation.

23 But what I'd really like to talk to you  
24 about today is the effect on client decision-making.  
25 Other people have spoken to many of the other issues,

1 and although I've spent most of my career at large  
2 firms, I counsel both large and small clients, and  
3 they ask for what's going to happen in a case.

4           So, in our cases, in almost all of my cases,  
5 they turn on the admissibility of scientific evidence.  
6 My clients are usually facing novel claims based on  
7 complex scientific analysis, and whether there's a  
8 common understanding of what the burden of proof is  
9 for a party putting forward an expert is absolutely  
10 critical. The process of analyzing the scientific  
11 support proffered by somebody making a novel claim is  
12 lengthy and costly. I suspect that many of you have  
13 seen the fruit of this work, the briefing that can go  
14 on and be very lengthy, but also hearings and witness  
15 testimony. What you may not see is all the work that  
16 goes on behind the scenes. Sometimes years of very  
17 expensive and extensive work goes into preparing for  
18 what is ultimately presented to the courts.

19           And a litigant faced with new claims based  
20 on novel evidence has to decide whether they're going  
21 to invest in experts of their own who will challenge  
22 unreliable methodology or application of methods and  
23 whether to do the work that is required to present  
24 that to the courts, and as clients consider this, they  
25 want predictability. They want to understand what is

1 the standard that will apply to the expert testimony.

2 As it stands today, federal judges don't  
3 apply the rule using the same standard. As you've  
4 heard and as the submissions state, as a result, we  
5 have to counsel clients that the standard is not  
6 predictable and that there's a risk that no matter  
7 that the experts who are proffered against them should  
8 not be admissible under what we believe the standard  
9 is under Rule 702, that an expert's opinion has to be  
10 the product of reliable principles and methods and  
11 that the expert must reliably apply those principles  
12 and methods to the facts of the case, some federal  
13 courts nonetheless will say that the standard for  
14 admitting expert testimony is a liberal one, that  
15 there is a presumption against excluding expert  
16 witnesses, which blunts the consideration of the  
17 unreliable evidence as we believe it should be.

18 Or they do so by finding that failures of  
19 reliability simply go to the credibility rather than  
20 the admissibility of the expert's testimony. And for  
21 clients, the absence of predictability, the failure of  
22 a uniform understanding really frustrates the goal of  
23 their rational decision-making. For litigants facing  
24 these decisions, having clarification of the rule that  
25 corrects the misunderstanding is really essential. It

1 will allow them to make rational decisions going  
2 forward and allow us to counsel them more clearly.

3 At the end of the day, predictability is a  
4 friend of the process, and a rule that disfavors  
5 predictability or prevents predictability is a rule  
6 that needs to be amended. Thank you.

7 CHAIR SCHILTZ: Thank you, Ms. Fuchs.

8 Any comments or questions by any of our  
9 Committee members?

10 (No response.)

11 CHAIR SCHILTZ: Seeing none, we'll move on  
12 then to Mr. Gotz, James Gotz.

13 MR. GOTZ: Good morning, Judge. Good  
14 morning, Professor and members of the Committee.

15 CHAIR SCHILTZ: Good morning.

16 MR. GOTZ: My name is James Gotz. I'm a  
17 partner at Hausfeld. I'm calling in from Portland,  
18 Maine, where it's also in the negatives, Judge. I'm a  
19 plaintiffs lawyer. I represent folks in  
20 pharmaceutical mass torts and in environmental cases.  
21 My written submission is at Tab 6 of today's  
22 materials. They focus on Rule 702 and more  
23 specifically the note and the proposed changes and  
24 additions to the note. The intention here is to offer  
25 what I'll call pragmatic and humanistic observations

1 and suggestions. And specifically today, I've  
2 suggested two sentences to be added to the note, one  
3 offering more guidance on assessing weight versus  
4 admissibility and another adding express reference to  
5 the continued relevance and guidance of the 2000 note.

6           So maybe this is simplistic, but this is how  
7 I think about this rule and this complicated area of  
8 practice. There's a rule. It needs to be followed.  
9 I understand the Committee's perception that there's a  
10 need to clarify it, and there needs to be as much  
11 clarity in the rule itself as possible, consistent  
12 with its intention and its purpose. But there needs  
13 to be enough guidance in the note to help the bench  
14 and the bar understand how best to follow the rule.  
15 We need to make sure the judges know where the gate-  
16 keeping begins and where it ends so as not to invade  
17 the province of the jury.

18           And so long as the judge is following the  
19 rule, I think we should also keep the following in  
20 mind: Judges are human. They're typically not  
21 steeped in scientific training. They're necessarily  
22 using their judgment and their discretion. And the  
23 note needs to be as useful and helpful as possible in  
24 supplying practical guidance for all members of the  
25 bench and the bar, not just the most seasoned and the

1 most sophisticated but everyone.

2           So, on the topic of weight versus  
3 admissibility, again, being simplistic, what we're  
4 talking about here is there's a flaw or at least a  
5 perceived flaw in the expert's methods, and the  
6 question for the judge, does it go to weight? Does it  
7 go to admissibility? And how do I, the judge, figure  
8 this out?

9           Scientists are also human, and perfection in  
10 their methods and conclusions is not the standard that  
11 we use to assess admissibility. So how does a judge  
12 figure this out? Because there's no if/then formula  
13 to figure out weight versus admissibility. The note  
14 currently explains, and properly so, not everything  
15 goes to admissibility. Some things go to weight. I  
16 think examples are useful, but my concern about the  
17 current proposed example and, frankly, any example is  
18 this, is that it can be misread or misunderstood or  
19 intentionally used to argue that per that example it  
20 is always so.

21           And that doesn't mean that examples are  
22 necessarily a bad idea, but whether or not there are  
23 examples in the note, there should be some further  
24 guidance related to the example. I've suggested a  
25 sentence as follows: Whether an opponent's challenge

1 is a matter that goes to weight or to admissibility is  
2 necessarily a case-specific inquiry for the court to  
3 assess, to be guided by the nature and the context of  
4 the particular challenge.

5 In other words, context matters when you're  
6 trying to figure out weight versus admissibility.  
7 This one additional sentence or something akin to it  
8 should help the judge better appreciate the need for  
9 what I'll call a holistic approach to the how-to part  
10 of the process while also helping to avoid unintended  
11 consequences from turning the example into a perceived  
12 if/then solution.

13 Concerning the 2000 note, in my written  
14 submission, also in red, I offer the following  
15 suggested additional sentence for the note: "Because  
16 Rule 702 is being clarified and not changed, the 2000  
17 committee note remains relevant and should continue to  
18 be used as guidance by the court and practitioners."

19 You heard a little while ago from Mr. Dahl  
20 for Lawyers for Civil Justice. He states in his  
21 written comment that Rule 702 and not case law sets  
22 the standards for admissibility of expert evidence.  
23 This rule amendment, as proposed, will not and, by its  
24 language, it's not intended to extinguish or replace  
25 the decades of case law that have developed since the

1 Supreme Court's ruling in Daubert, and that includes  
2 the cases cited as important guidance in the 2000  
3 note. Whether from the Supreme Court, the courts of  
4 appeal, or the district courts, that jurisprudence  
5 remains just as centrally important as the rule. They  
6 coexist. Here's just a few examples from the 2000  
7 note that continue to be relevant in motion practice  
8 about expert admissibility.

9 The trial court's role as gatekeeper is not  
10 intended to serve as a replacement for the adversary  
11 system. Proponents do not have to demonstrate that  
12 the assessments of their experts are correct, only  
13 that their opinions are reliable. Experts can reach  
14 different conclusions based on competing versions of  
15 the facts and it's not for the judge to decide which  
16 version of the facts to believe.

17 These and other guidance from the 2000 note  
18 are just as legally accurate and helpful to the bench  
19 and to litigants today as they were 22 years ago, and  
20 the bench and the bar should be expressly directed in  
21 this new note back to the 2000 note for continued  
22 guidance. Doing so should prevent both  
23 misunderstandings and mischief as well. Thank you for  
24 the time today.

25 CHAIR SCHILTZ: Thank you, Mr. Gotz.

1 Any questions or comments by the Committee?

2 (No response.)

3 CHAIR SCHILTZ: All right. We will move on  
4 then to Mr. Wayne Hogan. Good morning, sir.

5 MR. HOGAN: Good morning, Your Honor, and  
6 good morning to the Committee. I appreciate having  
7 the opportunity to participate today. My own practice  
8 has been in the State of Florida, and I represented  
9 the Code and Rules of Evidence Committee before the  
10 Florida Supreme Court recently, relatively recently,  
11 as to whether they should adopt the Daubert standard,  
12 702, and served on the Judicial Nominating Commission,  
13 the Federal Judicial Nominating Commission that is  
14 bipartisan in the history of Florida and chaired that  
15 for a number of years.

16 But, because my own practice has been in  
17 state courts for the most part, in preparation for  
18 this meeting with you, I looked at some of the rules  
19 that govern the process that you're involved in.  
20 You're a key part of the Supreme Court's work with  
21 Congress on the rules, and you help, as the Court  
22 does, prescribe the rules for 330 million Americans.  
23 And you are mindful that U.S. Code Section 2072 is  
24 explicit in saying that such rules shall not abridge  
25 any substantive right.

1           In this particular proceeding, the right  
2 most at risk is the right to trial by jury. And given  
3 your advisory role, Subsection D requires independent  
4 review by the standing committee. There, there is an  
5 added protection: a subcommittee that is to ensure  
6 that the rules are "written in clear and consistent  
7 language." I'll focus on just that, clear and  
8 consistent language, because the language of the first  
9 change in the draft rule is not clear and it is not  
10 consistent with Rules 104 and 1101.

11           In the mid-sixties, there was a movie called  
12 "Cool Hand Luke" and it coined a famous phrase, "What  
13 we've got here is failure to communicate." And,  
14 frankly, that's what we've got here on Line 5 of the  
15 draft that's before you, the draft text, a failure to  
16 communicate. If you were to start reading now down  
17 into the draft committee note, it would take 10  
18 paragraphs down to the very last one before it reveals  
19 that the text of the draft rule is incorrect, 10  
20 paragraphs to learn that if this draft goes forward as  
21 is, this Committee did not mean what it said in the  
22 text of the rule.

23           There's a compounding error. The text of  
24 the committee note itself repeats the error three  
25 times, even in its first substantive sentence. Simply

1 put, that's not how this should work, not in a careful  
2 committee like this.

3 In fact, if you go to uscourts.gov and the  
4 communication to the bench, the bar, and the public,  
5 we're told, "The pervasive and substantial impact of  
6 the rules demands exacting and meticulous care in the  
7 drafting of rule changes." To be specific, if the  
8 Committee were to decide to change the text of Rule  
9 702, the resulting text should be correct. Justice  
10 Kagan famously said not that long ago of the career of  
11 Justice Scalia, "We're all textualists now."  
12 Therefore, the text of an amended rule should, quite  
13 simply, not have to be corrected by the note.

14 To be specific about what's wrong with the  
15 draft text on this point, no one should have to read  
16 the committee note to learn that the Committee did not  
17 mean evidence when it said preponderance of the  
18 evidence, but it in actuality meant preponderance of  
19 the information presented. Why the attempted fix in  
20 the note? To belatedly correct the text of the draft  
21 because it is inconsistent with Rule 104 and 1101.  
22 That's why it's done, both making it clear that for  
23 preliminary questions, and these questions that we're  
24 talking about in 702 are preliminary questions to be  
25 decided by the judge, witness qualification and

1       admissibility, under those circumstances, the court is  
2       not bound by evidence rules.

3               So the text of the draft is neither clear  
4       nor consistent with the Federal Rules of Evidence.  
5       Why create this confusion in the first place? But  
6       there's something else, the states. The states are  
7       impacted by the work that is done by this Committee  
8       and the federal courts and the federal rules. Many  
9       states model their evidence rules on the federal  
10      rules, and many do that by statute. Evidence statutes  
11      enact rules. They do not enact committee notes. And,  
12      therefore, judges in those states that adopt a change  
13      that you might make are going to apply the literal  
14      text of the rule and not going to be looking 10  
15      paragraphs down to something that their legislature  
16      did not adopt.

17              This committee should have its eyes on the  
18      future. Every time this committee proposes a rule,  
19      that rule must say what it means. It must not be a  
20      rule that begs for correction in a committee note,  
21      where the committee is then saying, oh, by the way, we  
22      didn't mean what we said in the text of the rule. It  
23      bears repeating from above by the U.S. courts to the  
24      public, the bench, and the bar, the pervasive and  
25      substantial impact of the rules demands exacting and

1 meticulous care in the drafting of rule changes.

2           If I have a second, here's an analogy: the  
3 result of the current drafting before the Committee is  
4 the case of the tail, the committee note, wagging the  
5 dog, attempting to correct the rule. As between the  
6 rule and the note, the text of the rule is far more  
7 important. This is beyond what Mark Twain said about  
8 the almost right word versus the right word. This is  
9 about the wrong word, evidence, versus the right word,  
10 information, right there in the text of the rule. I  
11 appreciate very much having the opportunity to speak  
12 with the Committee.

13           CHAIR SCHILTZ: All right. Thank you, Mr.  
14 Hogan.

15           Does the Committee members have any  
16 questions or comments?

17           MR. CAPRA: Yeah, I do, if I might, Judge.

18           CHAIR SCHILTZ: Yes, go ahead.

19           MR. CAPRA: Thanks for your guidance. The  
20 term "evidence" was used because that's actually the  
21 term that's used by the Supreme Court in the Bourjaily  
22 case, preponderance of the evidence standard, and  
23 they're the court that construed 104(a). So we're  
24 relying on the Supreme Court for that term evidence.  
25 And evidence means information brought before the

1 court. Evidence might be inadmissible. There's  
2 admissible evidence and there's inadmissible evidence.  
3 What 104(a) says is that the court's not bound by  
4 admissibility, but it's all evidence that's in front  
5 of the court. And that's what the Supreme Court  
6 understood in Bourjaily.

7 So that was the -- just to tell you in terms  
8 of the carefulness of the drafting, which I think  
9 you're questioning, that was the providence.

10 MR. HOGAN: Do you mind if I speak to that?

11 MR. CAPRA: Sure.

12 MR. HOGAN: If you look at Bourjaily, you'll  
13 see that the question there was not evidence or  
14 information. The question was whether there should be  
15 a higher standard than preponderance that was being  
16 raised by the defendants. The use of the word  
17 evidence there was shorthand for what Professor Capra  
18 has just said is correct, information presented.

19 MR. CAPRA: But, in Bourjaily, actually, the  
20 trial court considers inadmissible evidence. The  
21 statement itself that's inadmissible evidence, I  
22 think, actually was the context.

23 MR. HOGAN: And that's why it's not  
24 necessary and misleading to say in the text of the  
25 rule evidence when we mean information presented.

1 CHAIR SCHILTZ: All right. Thank you.

2 Any Committee members have any other  
3 comments or questions?

4 (No response.)

5 CHAIR SCHILTZ: All right. Seeing none,  
6 thank you, Mr. Hogan, for your presentation.

7 MR. HOGAN: Thank you.

8 CHAIR SCHILTZ: Next, we'll turn to Katie  
9 Jackson.

10 MS. JACKSON: Good morning, Your Honor, and  
11 thank you for allowing me to testify this morning  
12 about the proposed amendments to Rule 702. My name is  
13 Katie Jackson, and I'm an attorney with the law firm  
14 Shook, Hardy & Bacon. I'm appearing today in my  
15 capacity as a fellow for the Lawyers for Civil  
16 Justice. You've already heard Alex Dahl on this. As  
17 an LCJ fellow this past year, I was able to conduct a  
18 year-long research project assessing how courts admit  
19 expert evidence under Federal Rule 702. My colleagues  
20 and I reviewed over a thousand federal cases decided  
21 in 2020 in which the judge either admitted, excluded,  
22 or partially admitted expert testimony.

23 We reviewed each case individually, looking  
24 for specific factors. One of those factors was  
25 whether the court articulated a standard requiring the

1 proponent of proffered expert testimony to show proof  
2 of its admissibility by a preponderance of the  
3 evidence. This, of course, is the preponderance  
4 standard that we've been discussing this morning,  
5 which is reflected in the Federal Rules explicitly in  
6 Rule 104(a) and then incorporated by comment in Rule  
7 702.

8 We compiled all of our findings into a  
9 report. This report was filed with the Committee in  
10 September as an official comment. So, overall, we  
11 found that the federal courts across the country are  
12 split over whether to apply the preponderance standard  
13 when admitting expert evidence. This split occurs  
14 within 57 of the 93 federal judicial districts, which,  
15 of course, covers every federal circuit court's  
16 jurisdiction in the country.

17 The research contains several specific  
18 findings. I'll discuss some of those specific  
19 findings with you today, and then I would direct the  
20 Committee's attention to the LCJ research comment that  
21 we filed for the full results.

22 First, the research shows that nearly two-  
23 thirds of the time, so in about 65 percent of the  
24 cases reviewed, courts do not mention the proponent's  
25 burden of proof or that a preponderance standard

1 applies to a Rule 702 analysis.

2 Inversely, this means that only about a  
3 third of the time, so in about 35 percent of the cases  
4 that we reviewed, courts mentioned that the proponent  
5 bears the burden of proving admissibility by a  
6 preponderance of the evidence. Of course, a court's  
7 silence regarding the standard does not prove the  
8 court allowed inadmissible evidence at trial, but it  
9 does indicate that the Rule 702 admission process may  
10 need clarification. And, after all, clarification  
11 would aid the parties' advocacy efforts before the  
12 court, as well as an appellate court's ability to  
13 review the trial judge's analysis.

14 To understand why clarification is needed on  
15 this point, the Committee may wish to consider this  
16 scenario playing out in other contexts. For example,  
17 imagine if two-thirds of opinions on prior restraint  
18 failed to mention the strict scrutiny standard or if  
19 two-thirds of opinions evaluating the scope of  
20 discovery failed to mention Rule 26(b)(1).

21 So the takeaway from this major first  
22 finding is that the majority of courts do not "show  
23 their work" when coming to an admissibility  
24 determination, making it more likely that issues, if  
25 they do exist, will only be compounded in the future.

1                   Turning to the second major research  
2                   finding, that one reveals that in about 13 percent of  
3                   cases, courts included language reflecting a  
4                   presumption of admissibility. This has already been  
5                   discussed this morning, but it includes comments such  
6                   as the federal rules having a "liberal thrust favoring  
7                   admission." So, at least in this percentage of cases,  
8                   we know that there was a clear presumption in favor of  
9                   admissibility, which does directly conflict with the  
10                  intent of Rule 702.

11                  And the final finding that I'll discuss  
12                  today is perhaps the most interesting finding for the  
13                  Committee's purposes. In a number of cases, courts  
14                  inconsistently required both a showing of  
15                  admissibility by a preponderance of the evidence, as  
16                  well as a presumption favoring admissibility. This  
17                  data point is particularly interesting because these  
18                  two standards directly conflict with each other, and  
19                  so it indicates that there is general confusion among  
20                  the courts over whether the preponderance standard  
21                  applies under Rule 702. It might also reveal deeper  
22                  confusion about what those separate standards mean.

23                  In conclusion, Your Honor, these results  
24                  indicate that Rule 702 is not applied consistently  
25                  across the country or even within the same federal

1 circuit or judicial district. The proposed amendment  
2 to Rule 702 would clarify that 702 requires courts to  
3 apply a preponderance standard prior to admitting  
4 expert evidence. I'm available to answer any of the  
5 Committee members' questions, but I would otherwise  
6 direct the Committee to the LCJ comment, which we  
7 filed and which includes more additional research for  
8 you. Thank you.

9 CHAIR SCHILTZ: Thank you.

10 Do any of the Committee members have any  
11 comments or questions?

12 (No response.)

13 CHAIR SCHILTZ: All right. Thank you again,  
14 Ms. Jackson.

15 Next, we will move to Andrew Kantra.

16 MR. KANTRA: Good morning.

17 CHAIR SCHILTZ: Good morning.

18 MR. KANTRA: My name is Andy Kantra. I'm a  
19 partner at Troutman Pepper, and for the last 25-plus  
20 years, I've been spending my time counseling clients  
21 and leading challenges on expert witness issues in  
22 MDLs and mass torts, primarily in the pharmaceutical  
23 context, and it is with that experience that I've  
24 observed firsthand the types of misunderstandings of  
25 Rule 702 that have led to decisions to admit

1 unreliable opinions.

2 Today, what I want to do is focus on one MDL  
3 in which I was involved, which is the Zyprexa MDL,  
4 that helps to explain why I support the amendments to  
5 Rule 702. With respect to Zyprexa, a little bit of  
6 background. It was formed in 2004. It was before  
7 Judge Weinstein in the Eastern District of New York.  
8 And Zyprexa was an antipsychotic medication that was  
9 used to treat schizophrenia and bipolar disorder, and  
10 the allegations were that it caused diabetes and  
11 excessive weight gain. The plaintiffs included  
12 thousands of individual patients, as well as the state  
13 attorneys general and a third-party payer litigation  
14 as well.

15 And so, with that context in mind about the  
16 MDL, I want to turn to Judge Weinstein's decisions.  
17 Between June of 2007 and May of 2009, Judge Weinstein  
18 made rulings on the admissibility of the opinions of  
19 30 different experts and he admitted all of them. In  
20 particular, in the third-party payer litigation, there  
21 were 21 experts across multiple disciplines, including  
22 many complicated damages calculations.

23 But, in evaluating those, Judge Weinstein  
24 disposed of the plaintiffs' challenges with one  
25 paragraph that described each of defendant's experts

1 as "a distinguished scientist whose expertise probably  
2 will be helpful." And with respect to the plaintiffs'  
3 experts, Judge Weinstein conducted a sua sponte review  
4 under Rule 702 without the benefit of briefing from  
5 the parties and concluded in two sentences that they  
6 should be admitted.

7 To explain these rulings, he invoked the  
8 "liberal standard of admissibility for expert  
9 opinions," citing to a Second Circuit opinion, Nimely.  
10 He then went on to cite pre-Daubert Second Circuit  
11 case law to support a presumption in favor of  
12 admissibility. But, in May 2009, Judge Weinstein held  
13 for the first time that an expert witness needed to be  
14 excluded in Zyprexa under Rule 702. This particular  
15 matter involved an endocrinologist whose name was Dr.  
16 Stephen Hamburger. He was proposed as a specific  
17 causation expert on behalf of 20 different plaintiffs.

18 So two years after the initial rulings that  
19 Judge Weinstein issued under Rule 702 that I just  
20 described and with the benefit of greater knowledge  
21 about the benefits and risks of anti-psychotic  
22 medications like Zyprexa, Judge Weinstein correctly  
23 noted that "precision with respect to relevant  
24 scientific knowledge and its application to the facts  
25 and individual cases is expected."

1                   And when he looked at Dr. Hamburger's  
2                   testimony, his conclusion was as follows: he was  
3                   shockingly careless about the facts and the cases that  
4                   he proposes to opine about. Faced under oath with  
5                   consistent extensive factual discrepancies in his  
6                   analyses, he merely shrugged them off or flippantly  
7                   shifted to a new theory and explanation to establish  
8                   causal relationships. He repeatedly and impermissibly  
9                   stretched the truth to support findings of causality.

10                   Judge Weinstein, looking at that, said that  
11                   he could not allow the Zyprexa MDL to become the  
12                   subject of the kind of "rubber-stamp expert opinions"  
13                   that have so marred mass litigations, and he said that  
14                   doing so, admitting Dr. Hamburger's testimony, would  
15                   "negate the struggle of the Supreme Court in cases  
16                   like Daubert and Kumho and of many individuals to  
17                   improve the utilization of science by law."

18                   So what are the lessons that I take away and  
19                   offer to you as you consider these amendments? Judge  
20                   Weinstein was smart. He was independent-minded. He  
21                   was a respected jurist and he wrote the book on the  
22                   Federal Rules of Evidence, but the current version of  
23                   Rule 702 and the related advisory committee notes led  
24                   him to conclude that there is a presumption of  
25                   admissibility of expert testimony that only allows

1 exclusion in the most extreme instances, such as Dr.  
2 Hamburger's. That's a far cry from the intent behind  
3 Rule 702, as the testimony of others makes clear.

4 The proposed amendments do what needs to be  
5 done. They are essential to clear up the  
6 misunderstandings and help direct that judges must  
7 scrutinize the scientific methodology and reliability  
8 of expert opinion rather than presuming its  
9 admissibility. Doing so in Judge Weinstein's words  
10 will improve the utilization of science by the law,  
11 and that is why I support these amendments. Thank you  
12 for your time and your consideration.

13 CHAIR SCHILTZ: Thank you, Mr. Kantra.

14 Are there any questions or comments from the  
15 Committee?

16 (No response.)

17 CHAIR SCHILTZ: Seeing none, we'll turn then  
18 to Mr. Kelley. Mr. Kelley, good morning. Thank you  
19 for joining us.

20 MR. KELLEY: Good morning. My name is Toyja  
21 Kelley, and I'm here in my capacity as president of  
22 DRI's Center for Law and Public Policy. I practice  
23 complex commercial litigation in the Washington, D.C.,  
24 office of Locke Lord LLP. I'm here to speak in  
25 support of expressly stating the proponent's burden in

1 admitting expert evidence and of bolstering that  
2 change by stating clearly the trial court's role in  
3 making that determination. It is the Center's view  
4 that the best amendment to Rule 702 would state, "If  
5 the proponent has demonstrated to the court by a  
6 preponderance of the evidence."

7 Rule 104 does not have an express  
8 preponderance of evidence standard, but the Supreme  
9 Court in Bourjaily interpreted Rule 104 to use that  
10 standard. This articulation was reiterated in  
11 Daubert, and yet, in practice, courts are often  
12 overlooking this standard, and, on occasion, trial  
13 courts have been reversed for actually applying it, as  
14 detailed in the comment provided by DRI and the  
15 Center.

16 As our written comments note, there are  
17 decisions stating that the proponent of expert  
18 evidence does not have to prove anything and others  
19 stating that there is a presumption in favor of  
20 admitting any evidence proposed under Rule 702. Thus,  
21 in order to achieve what Rule 702 has intended for  
22 more than 20 years, the preponderance of evidence  
23 standard must be stated in the text of Rule 702. As  
24 drafted, however, the preponderance standard can be  
25 misconstrued in accordance with the many decisions

1 that confuse the jury's fact-finding role with the  
2 court's gate-keeping role.

3 The proposed amendment is not meant to  
4 reiterate the civil burden of proof and it should not  
5 be misconstrued that way. Because of the abundance of  
6 decisions that seemingly punt the court's Rule 702  
7 role to the jury, the text should be admitted to  
8 negate that construction by saying that the court must  
9 find that there is a preponderance of evidence  
10 establishing each Subpart A through D of Rule 702.

11 In closing, I think it's important to note  
12 that my perspective on this issue is guided by the  
13 fact that I'm often on both sides of the VMI cases.  
14 As a result of that perspective, I see the proposed  
15 changes to Rule 702 as critical to the fair  
16 administration of justice, whether I'm representing a  
17 plaintiff or defending a defendant. Thank you for  
18 your time. And DRI's Center for Law and Public Policy  
19 appreciates the opportunity to address the Committee.

20 CHAIR SCHILTZ: All right. Thank you, Mr.  
21 Kelley.

22 Are there any questions or comments from the  
23 Committee?

24 (No response.)

25 CHAIR SCHILTZ: All right. We will move

1 then to Mr. Lasker, Eric Lasker.

2 MR. LASKER: Good morning, Your Honor,  
3 members of the Committee. My name is Eric Lasker.  
4 I'm a partner at the Washington, D.C., law firm  
5 Hollingsworth LLP. I am a co-author of the 2015 Law  
6 Review article that first called upon the Committee to  
7 amend Rule 702. At the invitation of the Committee, I  
8 also spoke at a roundtable discussion at the  
9 University of Denver in October 2018, and I have  
10 submitted additional thoughts to the Committee in  
11 written comments submitted in August of 2021.

12 Having thus followed the Committee's  
13 deliberations from the beginning, I seek first to  
14 commend the Committee on its good work and support the  
15 proposed amendment to Rule 702. While the Committee  
16 did not adopt all the language that I had suggested in  
17 my Law Review article, I believe that the proposed  
18 amendment goes a long way to improving the  
19 administration of justice in the federal courts.

20 I also urge the Committee to consider the  
21 proposal by the Lawyers for Civil Justice to add the  
22 language "if the court determines" to the text of Rule  
23 702. While I can understand the objection that might  
24 be made that this requirement is already implicit in  
25 the rule, misunderstanding of this Committee's prior

1 work in amending Rule 702 in 2000 demonstrates that  
2 what should be implicitly understood is too often  
3 overlooked when it comes to the issue of admitting  
4 expert testimony.

5 My main purpose today, though, is to impress  
6 upon this Committee the broader importance of its work  
7 in amending Rule 702 and to call upon the Committee to  
8 take further steps to ensure that its work is not  
9 undone in the same fashion as the work this Committee  
10 did back in 2000.

11 Members of the Committee, the need for  
12 institutions like the judiciary to stand firm in  
13 support of sound and reliable science could not be  
14 more pressing. We are today in the seemingly unending  
15 grasp of a COVID pandemic that has caused nearly  
16 900,000 deaths in this country. Most tragically, we  
17 know that a substantial number of those individuals  
18 were lost as much due to a disbelief in the science  
19 behind COVID vaccines as to the virus itself.

20 Scientific skepticism has become ingrained  
21 in our society, in our politics, and in our  
22 understanding and misunderstanding of the world. The  
23 distrust in science is not limited to one political  
24 party or one segment of society. It is widespread,  
25 bipartisan, and endemic. Much of us can do little to

1 remedy this problem, but this Committee can do a lot.  
2 The admission of shoddy scientific evidence in courts  
3 undermines the public faith in science at every level  
4 of society. In the realm of criminal law,  
5 organizations like the Innocence Project have  
6 highlighted how scientifically unreliable and  
7 speculative testimony has improperly condemned  
8 innocent people.

9 In the realm of civil tort law, where I have  
10 spent most of my practice, the failure of some courts  
11 to fulfill their gate-keeping responsibility has, to  
12 paraphrase Justice Breyer, led to the misuse of  
13 science, not to reduce or eliminate the right  
14 substances, but to destroy the wrong ones. Obviously,  
15 the proposed amendments to Rule 702 are not going to  
16 solve all the problems of scientific skepticism, but  
17 it is an important step, and it is an important step  
18 this Committee can take and must take.

19 Which leads me to my second point, which is  
20 that this Committee must view amending Rule 702 as  
21 only the first step in ensuring that judges live up to  
22 their gate-keeping responsibility. When I began my  
23 research for my 2015 Law Review article, I was frankly  
24 stunned when I read the Committee's deliberations and  
25 fully understood what the Committee was seeking to do

1 back in the late 1990s when it last amended Rule 702.

2 I have been practicing in the field of  
3 product liability and tort law for roughly 25 years.  
4 My practice has heavily focused on cases involving  
5 scientific evidence, and my firm has been involved in  
6 many of the leading decisions addressing the  
7 admissibility of unreliable scientific evidence.

8 Throughout this entire period, though, I had  
9 the misunderstanding that this Committee in 2000  
10 intended solely to codify Daubert in its amendments to  
11 Rule 702. This misunderstanding, which I believe is  
12 widespread throughout the legal and judicial  
13 committee, had the practical effect of robbing Rule  
14 702 of independent meaning.

15 As a result of this Committee's work, in  
16 2000, Rule 702 was significantly revised to provide a  
17 rigorous and structured approach, and it is far  
18 different than the language of the old Rule 702 that  
19 the Supreme Court interpreted in the Daubert trilogy,  
20 but only some courts took notice. Many other courts  
21 ignored the rule amendments altogether. This history  
22 must not be allowed to repeat itself. The Committee  
23 must be mindful not only of the importance of amending  
24 the language of the rule but on educating courts about  
25 the rule change to make sure that the amendment

1 actually achieves its purpose in ways that the 2000  
2 amendment regrettably did not.

3           Again, the Lawyers for Civil Justice have  
4 proposed new language in the advisory committee note  
5 to more clearly guide courts away from following cases  
6 that are not compatible with the language of Rule 702.  
7 I urge the Committee to adopt these regulations, but,  
8 beyond that, I call upon the Committee to consider  
9 what other steps might be necessary to make certain  
10 that this time Rule 702 is properly and uniformly  
11 applied in every federal court and circuit around the  
12 country. Thank you.

13           CHAIR SCHILTZ: Thank you, Mr. Lasker.

14           Are there any comments or questions for Mr.  
15 Lasker?

16           (No response.)

17           CHAIR SCHILTZ: Seeing none, we will move on  
18 to the next speaker then, who is Mary Massaron. Good  
19 morning, ma'am.

20           MS. MASSARON: Good morning. Good morning.  
21 I speak to you today and thank you for allowing me to  
22 address the Committee as an appellate lawyer with  
23 approximately 30 years practicing in state and federal  
24 courts, principally in Michigan and around the  
25 country. And in my experience, when I am working on a

1 case where a jury trial has resulted in an aberrant  
2 result, it's often due to expert testimony that was  
3 unreliable but was allowed into evidence and persuaded  
4 the jury.

5 District courts around the country, as well  
6 as appellate courts, are applying different standards  
7 and different understandings of Rule 702, which is a  
8 huge problem. And what I see happening all too often  
9 is that district courts look at the expert's  
10 credentials, but they leave the rigorous examination  
11 of whether the methods and principles that the expert  
12 is relying on are reliable and, even more, leave the  
13 reliable application of those principles to the facts  
14 to the jury. This is the most problematic approach in  
15 my view.

16 Research shows that when jurors lack the  
17 ability to understand scientific methodology and  
18 principles, and, after all, that's why the expert  
19 testimony is supposed to be allowed in, they fall back  
20 on external cues to determine whether to accept what  
21 the expert says as valid. So a highly credentialed  
22 expert who is not using reliable principles and  
23 methods that would be used outside the courtroom or is  
24 misapplying those principles to the facts or is  
25 purporting to apply those methods and principles where

1       there are not facts that would support their  
2       application, it's exactly in that circumstance that  
3       the jury is highly likely to fall back on the expert's  
4       credentials and accept those opinions.

5               It would be nice to think that all of the  
6       experts who come into court are bound by their oath  
7       and give unbiased and accurate testimony to the best  
8       of their ability, but I'm sure it's no surprise to  
9       anyone who's been involved in the litigation system in  
10      our country that there are, often enough to be a  
11      significant problem, experts who make a career out of  
12      testifying and who are merely paid advocates or  
13      partisans for the position of whoever is paying the  
14      fee for their testimony.

15             And it's at that problematic moment that the  
16      district court's rigorous consideration of whether  
17      that testimony is reliable becomes most important.  
18      Once those experts are allowed to present testimony,  
19      they throw up clouds of confusion, and yet their  
20      testimony may be given credence by the jury, not  
21      because it's well-founded but because they've been  
22      presented something as scientific and the jury is  
23      relying on the fact that they have some degrees or  
24      experience or credentials. So the jury simply accepts  
25      their analysis and reaches a wrong conclusion.

1           Psychologists have studied this, and in the  
2 written letter that I sent to the Committee, I cited  
3 one article at least that talks about this problem  
4 with juries relying on the external cues and why  
5 that's a significant problem.

6           When we see these problems, as an appellate  
7 lawyer, I would like to think I can correct them, help  
8 the clients reach the result that they should on  
9 appeal, but that is very often difficult. The federal  
10 appellate circuit courts of appeal have varied  
11 standards. It's not consistent around the country or  
12 even in some cases within circuits.

13           In addition, it's very difficult to overturn  
14 a wrong admission of expert testimony on appeal  
15 because the standard of review is often articulated as  
16 one that affords discretion to the trial court's  
17 ruling, and, of course, the harmless error standard is  
18 an easy fallback for an appellate court that doesn't  
19 want to upset a lengthy, complicated trial.

20           Because of that, it's absolutely essential,  
21 in my view, for the Committee to adopt these proposed  
22 changes. And I think even more essential than the  
23 changes to the rule, it's vital to include in the  
24 comment the list of cases that are out there creating  
25 huge confusion amongst well-meaning jurists who are

1       trying to do the right thing because those cases rely  
2       on the law before the amendment of Rule 702 and are  
3       not consistent with what the language of the rule is  
4       trying to do, what the Committee intended for the rule  
5       to do, and what's a proper understanding.

6                So I don't want to take any more of this  
7       Committee's time than is necessary. Those were the  
8       key points, and I did send a letter that elaborates a  
9       bit on them. I'd be very happy to answer any  
10       questions.

11               CHAIR SCHILTZ: Thank you.

12               Are there any questions or comments?

13               (No response.)

14               CHAIR SCHILTZ: All right. Seeing none,  
15       we'll move on to the next speaker, which is Mr.  
16       Masslon, John Masslon. Good morning, sir.

17               MR. MASSLON: Thank you, Your Honor, for  
18       giving me the chance to testify on behalf of  
19       Washington Legal Foundation. As explained more fully  
20       in our formal written comments, we support the  
21       proposed amendments to Rule 702. The amendments fix  
22       the problem of courts requiring the party objecting to  
23       expert testimony to show that the testimony was  
24       inadmissible. They also fix the problem of expert  
25       opinions unmoored from the application of reliable

1 methods and principles to the facts of the case.

2 But today I'll discuss minor tweaks to the  
3 proposed amendments that would further ensure that  
4 district courts properly act as gatekeepers to prevent  
5 juries from hearing unreliable expert testimony.

6 First, the Committee should take all steps  
7 possible to ensure that lower courts follow Rule 702's  
8 plain text and the Supreme Court's decisions  
9 interpreting the rule. There are outdated cases that  
10 courts disproportionately rely on when admitting  
11 expert testimony that violates Rule 702. There is an  
12 easy way for the Committee to stop courts from citing  
13 these cases: the Committee should add a comment that  
14 explicitly clarifies that those cases are not good  
15 law.

16 The Committee took this approach in 2015.  
17 Then the Committee added a note stating that the rule  
18 expressly rejects the holding of a Second Circuit case  
19 that other courts had relied on when perpetuating the  
20 error. The Committee should add a comment that Rule  
21 702 rejects the Eighth Circuit's decision in  
22 Loudermill v. Dow Chemical Company. There, the court  
23 said that, "As a general rule, the factual basis of an  
24 expert opinion goes to the credibility of the  
25 testimony, not the admissibility." That, of course,

1 is incorrect. Under Rule 702, courts must decide this  
2 question. Yet many courts quote that decision's  
3 language that disregards Rule 702's gate-keeping  
4 requirement.

5 Similarly, the Committee should explicitly  
6 reject the Fifth Circuit's decision in Viterbo v. Dow  
7 Chemical Company. There, the court said that, "As a  
8 general rule, questions related to the bases and  
9 sources of an expert's opinion affect the weight to be  
10 assigned that opinion rather than its admissibility."  
11 Again, that is wrong. A court should not be able to  
12 cite that decision to bypass Rule 702's gate-keeping  
13 requirement.

14 And in Smith v. Ford Motor Company, the  
15 Seventh Circuit incorrectly said that, "Soundness of  
16 the factual underpinnings of the expert's analysis"  
17 are "factual matters to be determined by the trier of  
18 fact." By adding a comment abrogating those cases,  
19 the Committee would ensure that they receive a red  
20 flag on Westlaw and Lexis, which in turn would help  
21 courts to avoid erroneously citing the cases. And for  
22 those plaintiffs' attorneys who continue to cite these  
23 cases, explicitly rejecting them in the committee's  
24 note would allow courts to impose sanctions under  
25 Federal Rule of Civil Procedure 11 for relying on the

1 cases.

2 Second, the Committee should ensure that  
3 courts apply Rule 702 fairly. The clarification the  
4 proponent of expert evidence must prove by a  
5 preponderance of the evidence that it's admissible  
6 under Rule 702 is a positive development. But further  
7 clarification would ensure that courts understand how  
8 the burden of proof operates. The Committee should  
9 add a note that states there is no presumption that  
10 district courts should admit expert evidence.

11 There's nothing explicit in the rule that  
12 explains why the court should apply a presumption when  
13 deciding a Rule 702 issue. The Committee should fix  
14 this by adding a note that explicitly states that  
15 there is no presumption. Rather, district courts must  
16 decide whether the party proffering the expert  
17 testimony has satisfied the preponderance of the  
18 evidence standard. If so, then the evidence is  
19 admissible. If not, it's admissible [sic].

20 Finally, the Committee should ensure courts,  
21 not juries, decide the admissibility of expert  
22 evidence. Adding the burden of proof to Rule 702  
23 presents an opportunity for enterprising plaintiffs'  
24 attorneys and district courts to skirt the rule's  
25 requirements by having the jury decide whether the

1 expert's evidence is admissible. They could argue  
2 that since a preponderance of the evidence standard  
3 should apply it's a factual question for the jury, not  
4 the judge.

5           There's an easy solution to this potential  
6 problem. The Committee should propose amending Rule  
7 702 as follows: "A witness who is qualified as an  
8 expert by knowledge, skill, experience, training, or  
9 education may testify in the form of an opinion or  
10 otherwise if the court finds that the proponent has  
11 demonstrated by a preponderance of the evidence that."  
12 These four words would ensure that judges, not juries,  
13 decide the admissibility of expert evidence. Thank  
14 you.

15           CHAIR SCHILTZ: Thank you.

16           Are there any questions or comments from the  
17 Committee?

18           MR. CAPRA: Judge, I do have a question if  
19 you don't mind.

20           So I'm a bit concerned about the coexistence  
21 of two statements. One, it's determined by a  
22 preponderance of the evidence, and two, there's no  
23 presumption at all with respect to expert testimony.  
24 I find those as inconsistent. If there's a  
25 preponderance of the evidence standard, then all

1 things being equal, there is a presumption against the  
2 admissibility of expert testimony, a mild one, but it  
3 is. So to add presumptions in there just seems to me  
4 to be very confusing. I guess that's my first point.

5 My second point, I guess, is -- I'll leave  
6 the second point. That's the only one I want to talk  
7 about.

8 CHAIR SCHILTZ: Okay. Mr. Masslon, go ahead  
9 if you wanted to respond.

10 MR. MASSLON: I disagree. I think that by  
11 saying "a preponderance of the evidence," you only  
12 need a feather on the scale of justice that shows that  
13 the evidence is admissible. I think the key is to say  
14 that there is no presumption that the evidence is  
15 admissible because that's what district courts are  
16 doing. They're saying that there's a presumption that  
17 expert evidence is admissible. And by saying that  
18 there is no such presumption that it's admissible,  
19 rather that the proponent must show by a preponderance  
20 of the evidence that it's admissible, you're making  
21 clear what that burden is and who it falls on.

22 MR. CAPRA: I understand that part, but the  
23 suggestion that's in the submission is that there's no  
24 presumption one way or the other. I don't understand  
25 that.

1           MR. MASSLON: I think that you have to  
2 evaluate the evidence and see whether there is a  
3 preponderance of the evidence. And to say that there  
4 is a presumption against it would indicate something  
5 more than a preponderance of the evidence standard in  
6 my mind.

7           MR. CAPRA: Okay. Thank you.

8           CHAIR SCHILTZ: Any other questions or  
9 comments?

10           (No response.)

11           CHAIR SCHILTZ: All right. Thank you, Mr.  
12 Masslon.

13           MR. MASSLON: Thank you.

14           CHAIR SCHILTZ: Next, we'll go to Lee Mickus  
15 or Mickus.

16           MR. MICKUS: Lee Mickus, Your Honor. And  
17 thank you very much for the opportunity to present my  
18 views to the Committee. I'm a civil litigator who  
19 defends manufacturers in product liability cases  
20 around the country, and in that capacity, I encounter  
21 Rule 702 disputes on a very regular basis. I support  
22 the proposed amendment but encourage the Committee to  
23 add a direct reference to the court as decision-maker  
24 to the text of the rule.

25           First, I'd like to spend a moment, just a

1 moment, on the need for the amendment. I think there  
2 is a need because courts are presently not clear on  
3 their gate-keeping role and, frankly, they're  
4 presently caught between the text of Rule 702 and some  
5 problematic case law that gives contrary direction  
6 about what they should do. You've seen in the  
7 comments from Bayer, from Lawyers for Civil Justice,  
8 from the Colorado Civil Justice League and others that  
9 some hundreds of Rule 702 decisions in the last  
10 several years contain statements showing that courts  
11 do not understand that they must determine that the  
12 sufficiency of an expert's factual basis or the  
13 reliability of the methodological application are  
14 matters for the court.

15           Instead, these judges frequently pass that  
16 responsibility to the jury, despite Rule 702(b). Many  
17 of these decisions follow pre-Daubert case law  
18 statements, such as those just mentioned by the last  
19 speaker, Loudermill, Viterbo, and Smith in particular.

20           Those cases do not interpret Rule 702. They  
21 were decided before it came into being as it currently  
22 exists. The reliance on these cases indicates that  
23 current courts are frequently distracted by these  
24 problematic prior rulings and are deeply confused as a  
25 result on the standard that they should apply. The

1 large body of decisions that overlook essential  
2 aspects of Rule 702 demonstrate that the current rule  
3 simply does not provide adequate guidance to the  
4 courts about their gate-keeping responsibility, and  
5 amending Rule 702 to add the preponderance of evidence  
6 standard into the rule will better convey the elements  
7 of Rule 702 are all admissibility considerations.

8 But the amendment can be made even better.  
9 Rule 702's text needs to give unambiguous guidance  
10 that the court is the decision-maker on the enumerated  
11 admissibility considerations. Adding the phrase "if  
12 the court determines" or similar language to the text  
13 of the rule would provide that clarity about the  
14 court's role, and doing so will help those courts that  
15 are caught in that bind between the text of the rule  
16 and these problematic case law get out of that bind.

17 Judges are likely to look first to the text  
18 of the rule itself for direction. If they have a mis-  
19 impression of the court's role due to that mistaken  
20 case law, the most effective way to communicate their  
21 responsibility is to tell them in the text of the rule  
22 that the judge must consider and decide the listed  
23 elements. Doing so will convey that these are not  
24 matters that can be conveyed to the jury. And I noted  
25 in my written testimony that members of the Committee

1 themselves have used phrasing similar to "if the court  
2 determines" when describing how Rule 702 in either its  
3 present or in its proposed amended form should  
4 operate. That certainly suggests to me that these  
5 words provide a clear explanation that other courts  
6 could draw guidance from.

7 Far from being confusing, as my friends at  
8 the AAJ have suggested, placing "if the court  
9 determines" into the rules language would unmistakably  
10 signal that the judge's gate-keeping responsibility  
11 includes evaluating the sufficiency of factual basis  
12 or the application of methodology, as Rule 702  
13 intends. Further, this phrase would provide an answer  
14 to any possible uncertainty about the status of  
15 incorrect case law declaring general rules about  
16 factual basis or methodological application being  
17 matters of weight and not admissibility. By adding  
18 that phrase to the text, the rule would necessarily  
19 render those opinions incompatible with the text of  
20 the rule.

21 Also, I don't expect that courts would  
22 interpret the phrase "if the court determines" to  
23 establish a new universal requirement to perform a  
24 Rule 702 review even without an objection. I know  
25 that concern has been raised with the Committee. The

1       adversary system operates on an understanding that an  
2       opponent must object to evidence in order to initiate  
3       the court's scrutiny, and that expectation applies  
4       across all rules of evidence.

5                In order to shift this thinking to conclude  
6       that Rule 702 alone, among all the evidence rules,  
7       would obligate judges to sua sponte conduct a review,  
8       the rule and the note would need to contain direct and  
9       explicit language indicating that major change in  
10      practice, but the words "if the court determines" just  
11      don't support that conclusion that a fundamental  
12      change in approach is intended.

13               If amended to add this phrase, the rule and  
14      the note would contain no direct statement that a  
15      party need not object, and nothing in the note, as  
16      presently drafted, suggests that a purpose is to  
17      create a new requirement that judges must conduct a  
18      detailed review for every expert who must testify  
19      objection or no.

20               If the Committee truly fears that some  
21      judges may over-read that phrase, "if the court  
22      determines," to create this new obligation for sua  
23      sponte review, that possible interpretation could be  
24      controlled by a statement within the committee note  
25      indicating that that is not the intent of these few

1 words that are being added to the rule. That's an  
2 appropriate and frequently taken approach in committee  
3 notes.

4 Alternatively, if the Committee is truly  
5 concerned that this is a possibility, adding to the  
6 text of the rule a phrase such as "on timely request,"  
7 such as Rules 105 and 201(e) contain, or "at a party's  
8 request," as Rule 615 contains, would provide  
9 direction that courts should act in response to an  
10 objection and not act sua sponte.

11 With this amendment to add "if the court  
12 determines," the proposed amendment would put all the  
13 necessary information in the text of the rule, so  
14 there will be no ambiguity when a judge opens up the  
15 rule book and decides what he or she is supposed to  
16 do. The preponderance standard, the burden of  
17 production is there in the rule.

18 The direction that this is a court decision,  
19 not something to be deferred to the jury, is in the  
20 text of the rule. Everything that's necessary in  
21 terms of the elements of admissibility are listed out  
22 in the text of the rule. That will present in one  
23 tight package what the court needs, and putting that  
24 in an amendment will provide courts that are currently  
25 confused about their responsibility with the guidance

1 that they need and it'll go far to unify the courts in  
2 a single approach to Rule 702 objections. Thank you,  
3 Your Honor, and I'd be happy to answer any questions.

4 CHAIR SCHILTZ: Thank you, Mr. Mickus.

5 Are there any questions or comments by the  
6 Committee members?

7 (No response.)

8 CHAIR SCHILTZ: Okay. Thank you again.

9 At this point, we've gone over an hour and a  
10 half. I want to just take a short break. We'll take  
11 a 10-minute break. We'll come back, and then we have  
12 about eight or nine speakers to hear from. I will be  
13 back in 10 minutes.

14 (Whereupon, a brief recess was taken.)

15 CHAIR SCHILTZ: All right. We will resume  
16 our hearing at this point. The next speaker is Amir  
17 Nassihi. I don't know if I'm pronouncing that  
18 correct.

19 MR. NASSIHI: That is absolutely correct.  
20 Thank you. Good morning.

21 CHAIR SCHILTZ: Good morning.

22 MR. NASSIHI: Thank you all for letting me  
23 come and speak today. My name is Amir Nassihi. I'm a  
24 partner at Shook, Hardy & Bacon and co-chair its class  
25 action group. I really do appreciate the chance to

1 talk today about how Rule 702 interacts with Rule 23,  
2 which governs class actions. Much of my practice  
3 involves defending class actions, and much of the  
4 debate over certifying class actions really boils down  
5 to whether you can trust the experts offered on either  
6 side.

7 Rule 23 requires a rigorous analysis before  
8 certifying a class, and both sides often provide  
9 expert evidence at that certification stage. But  
10 courts do not always treat that expert evidence  
11 according to the guidelines of Rule 702, and, in fact,  
12 there is a split among appellate circuits in how  
13 courts treat expert evidence in class certification.  
14 Some circuits, namely the Third, Fifth, and Seventh,  
15 mandate a correct application of whether expert  
16 evidence meets Rule 702 standards and recognizes the  
17 gatekeeper responsibility of the courts.

18 By contrast, the Eighth follows a focus  
19 standard, which lets in more questionable expert  
20 evidence, and the Sixth has no discernible standard.  
21 Finally, the Ninth has issued a series of cases that  
22 create confusion about what is and is not appropriate  
23 in a 702 analysis at certification. One opinion, Sali  
24 v. Corona Regional Medical Center, had a panel affirm  
25 certification based on pseudo-expert evidence

1 submitted by a paralegal. In another, the Grodzitsky  
2 v. Honda decision, another panel affirmed a denial of  
3 certification that was based on excluding questionable  
4 testimony of an expert. And another more recent  
5 opinion in Olean v. Bumble Bee Foods, the Ninth  
6 Circuit attempted to set out the correct standard for  
7 addressing 702 issues and making clear the gate-  
8 keeping requirement of the judge. It also sought to  
9 resolve ambiguities in certification standards in  
10 making clear that the preponderance of the evidence  
11 standard applied to demonstrating all aspects  
12 supporting certification.

13 Now the dissent in that case disagreed with  
14 different parts of the decision but agreed with those  
15 core components related to Rule 702 and related to  
16 preponderance of the evidence in relation to  
17 demonstrating the all facts supporting classification,  
18 but the dissent related to standing issues, and the  
19 opinion was thus vacated on those grounds and an en  
20 banc panel is rehearing it, focusing on the standing  
21 issue, and it's unclear if it'll even address Rule 702  
22 aspects of the original decision.

23 So it's my view that the proposed amendment  
24 will help courts understand that the expert evidence  
25 must be handled according to Rule 702's requirements

1 with care at high-stake hearings. I understand the  
2 Committee is also considering revising the comments to  
3 the rule, and my view is that the clear and uniform  
4 judicial gate-keeping standard is critical in class  
5 actions since the admission or exclusion of expert  
6 testimony really makes a difference between facing an  
7 individual lawsuit or facing the company litigation  
8 with the associated pressures to resolve.

9 As a couple of examples, in one case, I'm  
10 defending a product manufacturer. The court allowed  
11 in questionable expert testimony to support  
12 certification, and the proper gate-keeping standard  
13 under 702 was very much a focus of the debate. The  
14 court ultimately did so not because the evidence was  
15 particularly reliable but because it believed a lesser  
16 Rule 702 standard applied at certification. But Rule  
17 702 does not have gradations of rigor. Either expert  
18 opinions are well-founded or they're not.

19 So I also support further elaboration and  
20 comments on how to apply the preponderance standard.  
21 A recent case I defended involved a pet food company  
22 and submission of expert testimony that heavy metals  
23 bioaccumulate in pet food. Now the phenomena of  
24 bioaccumulation as described in the case matched the  
25 description of what many courts have derived as the

1 any exposure theory of toxic substances, and under  
2 this theory, which lacks scientific rigor, any  
3 exposure can cause ill effects because exposures  
4 accumulate.

5           The theory as articulated required constant  
6 speculative leaps to maintain, but the trial court,  
7 even though it referenced a preponderance standard, in  
8 the same paragraph, it also talked about 702 being a  
9 flexible standard, and following that, the court then  
10 rejected all critiques of the foundation of the  
11 expert's theory as a matter of weight and not  
12 reliability, even though they specifically addressed  
13 the scientific soundness of the opinion.

14           Now these examples are all too common. I  
15 just the other day read a relatively new Ninth Circuit  
16 decision from last month in a case called MacDougall  
17 v. Honda, and there, the Ninth Circuit reversed the  
18 trial court's exclusion of a damages expert in a class  
19 action. The expert testimony had been the sole  
20 support to show that injury could be proven on a  
21 class-wide basis. The defendant had challenged the  
22 report's methodology because it had not addressed any  
23 market considerations at all that were relevant. It  
24 had selected the wrong attributes. It had improperly  
25 used averages. But, in an all too familiar refrain,

1 the Ninth Circuit in an unpublished decision held that  
2 all these challenges go to the weight and not  
3 admissibility.

4 So, for these reasons, I support what the  
5 Committee is doing, and I very much thank you for the  
6 opportunity to testify.

7 CHAIR SCHILTZ: Thank you, Mr. Nassihi.

8 Are there any questions or comments?

9 (No response.)

10 CHAIR SCHILTZ: Hearing none, we'll move on  
11 then to Leslie O'Leary.

12 MS. O'LEARY: Thank you, Your Honors and  
13 members of the Advisory Committee. I'm Leslie  
14 O'Leary. I'm an attorney at the law firm Ciresi  
15 Conlin LLP in Minneapolis. For the last 23 years,  
16 I've represented plaintiffs in --

17 CHAIR SCHILTZ: Oh, Ms. O'Leary, I'm sorry,  
18 I can hear you but not see you. Do you have a camera  
19 you can turn on?

20 MS. O'LEARY: Now I do. Thank you.

21 CHAIR SCHILTZ: There you go. All right.  
22 Thank you.

23 MS. O'LEARY: Okay. So, to start over, my  
24 name is Leslie O'Leary. I'm an attorney at the law  
25 firm Ciresi Conlin in Minneapolis. I've represented

1 plaintiffs in product liability actions both in  
2 federal and state court, and, in fact, a great deal of  
3 my life's work has been focused on the admissibility  
4 of expert testimony under Rule 702. I'm here today to  
5 express concern over the proposal by various interest  
6 groups to insert a comment in the Rule 702 --

7 (Technical interference.)

8 MS. O'LEARY: -- certain opinions, appellate  
9 court decisions, as wrongly decided.

10 While it's understandable that any losing  
11 party on a contested issue such as this will disagree  
12 with the court's holding and analysis, it shouldn't be  
13 the function of this Committee to declare that a rule  
14 of decision is invalid and must no longer be followed.  
15 The Advisory Committee isn't a court of law. It's not  
16 empowered to decide legal matters, and whether a  
17 federal court of appeal has wrongly interpreted or  
18 misapplied Rule 702 or any rule of evidence for that  
19 matter is an issue that's properly resolved by the  
20 Supreme Court through the judicial appellate process.

21 So taking sides on judicial opinions not  
22 only creates an appearance of bias and detracts from  
23 the Committee's important work, it creates a more  
24 fundamental risk. It forces the Committee to make  
25 assumptions about the volumes of data the trial judge

1 and the appellate court thoroughly considered in  
2 deciding these admissibility questions. And without  
3 comprehensively reviewing the entire record in each  
4 case and assessing all the information and witness  
5 testimony, as both the trial court and the reviewing  
6 court did, how can the Committee conclude with  
7 certainty that a case was, in fact, wrongly decided.

8 And, relatedly, the court shouldn't accept  
9 at face value the argument that appellate decisions  
10 should be officially renounced for creating bad  
11 precedent. The Loudermill opinion in the Eighth  
12 Circuit is a really good case in point. Defense  
13 organizations dislike Loudermill's rule that the court  
14 may exclude an expert opinion if it is so  
15 "fundamentally unsupported that it can offer no  
16 assistance to the jury." They contend this standard  
17 sets such a low bar to admissibility that it  
18 essentially mandates admission of expert testimony.

19 But Loudermill doesn't stand for the  
20 proposition that defense groups claim. In fact, the  
21 Eighth Circuit recently clarified in the In re Bair  
22 Hugger opinion that Loudermill's so fundamentally  
23 unsupported standard is simply another way of stating  
24 the rationale announced by the Supreme Court in Joiner  
25 that testimony may be excluded if it is too great an

1 analytical gap between the actual bases for the  
2 expert's opinions and the conclusions they generate.

3           The detractors of the current Rule 702 have  
4 cherry-picked cases like Loudermill to create a false  
5 narrative that junk science has run rampant in the  
6 federal courts, but this dire depiction simply isn't  
7 true. In fact, as I was preparing for this hearing, I  
8 ran a quick check of Eighth Circuit decisions on  
9 admissibility of testimony under 702, and from this  
10 very cursory review, I found no fewer than a dozen  
11 Eighth Circuit decisions that excluded the plaintiff's  
12 expert opinions, nearly all of them citing Joiner or  
13 Loudermill or both for the rationale that there was  
14 too great an analytical gap or unsupported speculation  
15 for their opinions.

16           So this further confirms that in practice  
17 trial courts and appellate courts are not confused or  
18 blindly admitting testimony or misconstruing the  
19 standards of admissibility. To the contrary, over the  
20 last 22 years since the amendments to 702 were adopted  
21 in 2000, courts have remained consistent and  
22 consistently cautious and vigilant in screening expert  
23 testimony.

24           So, in closing, I would urge the Committee  
25 to avoid wading into the partisan fray and not call

1 out established appellate decisions and decree them  
2 invalid. It would dishonor the judiciary and do  
3 unnecessary harm to the Committee's esteemed  
4 reputation as a neutral advisory body. Thank you so  
5 much for this opportunity to be before you today.

6 CHAIR SCHILTZ: Thank you, Ms. O'Leary.

7 Any questions or comments from the  
8 Committee?

9 (No response.)

10 CHAIR SCHILTZ: All right. Next, we'll move  
11 to Jared Placitella. Mr. Placitella? Hope I have  
12 that right.

13 MR. PLACITELLA: Yes, you do, Your Honor.  
14 Good afternoon, Your Honor and Committee members. My  
15 name is Jared Placitella, and I'm an attorney with  
16 Cohen, Placitella & Roth. We are located in New  
17 Jersey and Philadelphia and represent plaintiffs in  
18 toxic tort cases. I rise to tell this Committee that  
19 it should refrain from enacting the proposed  
20 amendments for the text of Rule 702 and the committee  
21 note. The revisions will not fix the alleged  
22 problems, such as managing congested court dockets or  
23 experts offering opinions outside their expertise that  
24 have been previously raised.

25 The stated intention of the amendment is to

1 clarify that the requirements of Rule 702 must be  
2 established by a preponderance of the evidence for the  
3 expert's testimony to be admissible. But a test that  
4 analyzes evidence is not supported by judicial  
5 precedent. And a preponderance standard has been  
6 incorporated into Rule 702 for the last 20 years and  
7 it has been applied by trial courts, whether expressly  
8 stated in their opinions or impliedly so since that  
9 time.

10 In Daubert, the court instructed that in  
11 using Rule 104(a) to determine whether an expert seeks  
12 to testify to scientific knowledge helpful to the  
13 trier of fact, trial judges "are not bound by the  
14 rules of evidence" and that "these matters should be  
15 established by a preponderance of the proof."

16 Yet, by requiring that Rule 702 be  
17 established by a preponderance of the evidence rather  
18 than a preponderance of the proof or, better yet, a  
19 preponderance of the information, as suggested in the  
20 draft committee note, trial courts and the advocates  
21 before them may mistakenly find that they are bound by  
22 the rules of evidence, which is not what Daubert  
23 envisioned.

24 In comparing weight versus admissibility,  
25 the note further reinforces that trial courts should

1       conduct an analysis of only admissible evidence. That  
2       is especially true if this Committee were to reinsert  
3       "if the court determines" back into the preamble, as  
4       others have advocated. But the note later states that  
5       the amendment means that the judge must find on the  
6       basis of the information presented that the proponent  
7       has shown the requirements of the rule to be met.

8               But the explicit contradiction between  
9       preponderance of the evidence in the rule and basis of  
10       the information in the note will sow unnecessary  
11       confusion among trial courts of what burden should be  
12       applied and what proof should be considered in  
13       deciding whether to admit expert testimony. For  
14       instance, Rule 702 as written would contradict Rule  
15       703, which permits experts to base their opinions on  
16       inadmissible facts or data.

17               Yet, under the proposed rule, only  
18       admissible evidence can be used to show that the  
19       expert's methodology and opinion are reliable. If  
20       this Committee decides to move forward with an  
21       amendment, the Committee can simply substitute  
22       information for evidence in the text of the rule's  
23       preamble to eliminate any possible confusion and to  
24       inform state court judges around the country whose  
25       states will not incorporate or codify the committee

1 note.

2           The proposal to amend Rule 702 is also  
3 unnecessary. The Committee explained that this  
4 amendment is essential because jurors may be unable to  
5 evaluate the reliability of an expert's methodology  
6 and assess whether the conclusions generated are  
7 supported by it. Besides underestimating jurors, this  
8 revision has the practical and unintended potential to  
9 cause the court to mistakenly believe that it, not the  
10 jury, must decide the correctness of scientific  
11 evidence.

12           That invasion of the province of the jury  
13 undermines a hallmark of our civil justice system that  
14 recognizes the collective wisdom of the jury is  
15 superior to the perspective of any single individual.  
16 Indeed, the current rule and 2000 committee note  
17 already address the stated problem that the proposed  
18 amendment seeks to fix by reminding trial courts to  
19 follow Joiner's teaching that they should consider  
20 whether the expert has unjustifiably extrapolated from  
21 an accepted premise to an unfounded conclusion. The  
22 current framework emphasizes that your trial judge  
23 must exercise its gate-keeping function to the  
24 expert's ultimate opinion as well as his or her  
25 methodology.

1           Practically, the amendment to Rule 702(d)  
2 risks transforming Daubert hearings into mini-trials  
3 whereby trial judges, who are not qualified to  
4 evaluate the correctness of an expert's conclusion,  
5 review each scientific study individually for whether  
6 it reliably supports the ultimate conclusion being  
7 advocated or opposed. That would be contrary to the  
8 scientific method itself.

9           Finally, the note explains that the  
10 amendment to Rule 702(d) is especially pertinent to  
11 the testimony of forensic experts in both criminal and  
12 civil cases. Instead of amending Rule 702(d), which  
13 applies to the opinions of all experts in all  
14 disciplines in all cases, further education may be  
15 provided to trial judges or the forensics chapter of  
16 the reference manual on scientific evidence may be  
17 supplemented in order to provide trial judges with any  
18 further necessary guidance. Your Honor, thank you for  
19 the opportunity to address this Committee.

20           CHAIR SCHILTZ: Thank you, Mr. Placitella.

21           Any comments or questions from the  
22 Committee? Professor Capra, I can't tell if you're  
23 about to comment or not. Okay. You had the look.

24           All right. We will turn next to then Mr.  
25 Bill Rossbach. Mr. Rossbach?

1 MR. ROSSBACH: Yes. Am I on screen? I  
2 can't -- I'm not sure I am.

3 CHAIR SCHILTZ: Yeah, you are. You're a  
4 little not centered, but we can both see and hear you.

5 MR. ROSSBACH: Okay. Thank you very much.  
6 As stated, my name is Bill Rossbach. I'm a  
7 plaintiffs' trial attorney in Missoula, Montana. And  
8 I want to thank you for giving me the opportunity this  
9 morning to provide comments regarding the proposed  
10 amendments.

11 I have practiced 40 years litigating  
12 exclusively cases involving medicine, engineering, and  
13 science. Every case that I have litigated and tried  
14 in Montana and many other states has required at least  
15 one and often as many as 20 or more expert witnesses.  
16 As I described in my letter to the Committee that is  
17 included at Tab 19, I would like to focus here on  
18 three points. First is a simple, straightforward one,  
19 following on what Ms. O'Leary said, if the primary  
20 goal of the amendments is clarification and education,  
21 then the criticisms of the courts in the comment will  
22 be counterproductive and jeopardize the credibility of  
23 the committee note. As Mr. Dahl from the Defense Bar  
24 labeled it, scolding is rarely a sound pedagogical  
25 strategy. I strongly urge removal of all references

1 critical of court and jury decisions.

2 Second, and this is where I'm somewhat  
3 handicapped a little bit by following Mr. Placitella,  
4 if clarification and education is the goal here, then  
5 the use of the term "preponderance of evidence" is a  
6 significant backward step and will likely create  
7 confusion, not clarity.

8 "Evidence" is a legal term of art. It  
9 describes information that meets the requirements of  
10 admissibility and can be introduced and considered by  
11 the finder of fact. "Information" is not evidence  
12 until it is deemed admissible. The addition of the  
13 preponderance standard is a principal amendment to the  
14 rule. Whether it's needed or not, I'm not going to  
15 comment, but to use the term evidence in that standard  
16 directly contradicts Rule 104, which expressly states  
17 that in making a preliminary determination, the court  
18 is not bound by the rules of evidence. If it's not  
19 bound by the rule of evidence, then it is inconsistent  
20 and conflicts with Rule 104 to use the term evidence  
21 in the preponderance standard.

22 I would like to take a couple of minutes to  
23 follow up a little bit on the two cases, one of which  
24 is cited in the comment and the case which is, I  
25 think, the case from which Rule 702 arises. The first

1 is Bourjaily, which is the bridge that connects Rule  
2 104 and Rule 107(o)(2). While not a paragon of  
3 clarity, as Professor Capra noted, the court, in  
4 several instances, used the term "preponderance of  
5 evidence," but it does not take a close reading to  
6 realize that the court is referring to what is  
7 described in Rule 104 as information, not evidence.

8           If you look at page 175 of 48 U.S., the  
9 court says, "We have traditionally required that these  
10 matters," referring to 104, "be established by a  
11 preponderance of proof." Evidence is placed before  
12 the jury when it satisfies the technical requirements  
13 of the evidentiary rules. In other words, it's not  
14 evidence until it fits the evidentiary rules. And the  
15 court made the further statement, which clearly  
16 indicates the role that needs to be emphasized here  
17 between the jury and the court, it says, "The inquiry  
18 made by the court concerned with these matters is not  
19 whether the proponent of the evidence wins or loses  
20 the case but whether the evidentiary rules have been  
21 satisfied."

22           It goes on in the next paragraph to say --  
23 and, again, this talks about preponderance of the  
24 evidence. I know some courts have said they have not  
25 used that term, but as the court in Bourjaily

1 announced, the preponderance standard ensures that  
2 before admitting evidence, the court will have found  
3 it more likely than not that the technical issues and  
4 policy concerns addressed by the Federal Rules of  
5 Evidence have been afforded due consideration.

6 And in Daubert then, which follows and cites  
7 to Bourjaily, Daubert noted that judges are not bound  
8 by the Rules of Evidence at 509 U.S. at 601 and,  
9 again, cited the specific language from Bourjaily,  
10 "preponderance of proof." So, if we're talking about  
11 a Rule 702 to follow the guidance of the Supreme Court  
12 on Daubert, it is preponderance of proof that the  
13 court was looking at.

14 This is also consistent with Rule 703, which  
15 clearly states that experts need not rely on facts or  
16 data that is admissible. So let me just then follow  
17 up with my concern about the practical problem here.  
18 It's a practical problem when you use terms  
19 inconsistently. Throughout, in both 703 and 104, it  
20 is not admissible evidence that is required. And in  
21 my view, let's do a balancing here. What is the  
22 upside of using evidence versus the downside of  
23 potential confusion of evidence versus information?  
24 There is no upside to using evidence. There is plenty  
25 of downside to using evidence. There is plenty of

1 upside to using information and no downside to using  
2 information. If we want to be practical and make it  
3 easier for judges to understand what they can or  
4 cannot use, then I strongly urge that we use the word  
5 information, not evidence.

6 I would also like to follow up a little bit  
7 on Mr. Hogan's practical concerns. In Montana and a  
8 number of the other places where I practice in state  
9 law by pro hac or otherwise, they do not include  
10 comments. So the clarification in the comment about  
11 information and not evidence, as Mr. Mickus said, we  
12 need to put these things in the rule, not necessarily  
13 in the comments. These comments are not necessarily  
14 going to be in state court if the state court adopts  
15 Rule 702. I think it's more important to put the word  
16 information in the rule rather than evidence.

17 Lastly, I wanted to make a brief comment  
18 about the LCJ's study of 1,059 cases, which numerous  
19 witnesses have used to support various unstated  
20 conclusions. The bottom line, as I say, there is  
21 widespread confusion, but if this were a report that  
22 was going to be relied on or used as an expert for  
23 expert opinion, it would not be admissible. It  
24 provides very little information about the methodology  
25 that was used, what databases were searched, what

1 search engines were used, how did they determine that  
2 these 1,059 cases were cases that were the only cases?  
3 What analytical or statistical methods were used and  
4 why? How did they use these methods to reach a  
5 conclusion?

6 The conclusion that I heard from I think it  
7 was Ms. Jackson was two-thirds of the courts failed to  
8 mention the preponderance standard. Does that mean  
9 that they didn't consider the preponderance standard?  
10 What does it mean at all? It means nothing except  
11 that two-thirds -- that one-third didn't use the  
12 preponderance standard doesn't prove anything. It's  
13 just, again, the concern I have that this is nothing  
14 more than anecdotal -- I guess I would use the word  
15 anecdotal information that has really no scientific or  
16 other basis.

17 And the final thought I have is this is a  
18 constitutional right to a right to a jury trial. The  
19 right to a jury trial is, at bottom, a part of this  
20 rule. The Seventh Amendment, with the addition of the  
21 preponderance of evidence standard, it will lead to  
22 decisions that usurp the ultimate fact-finding role of  
23 the jury. And, with that, I would like to thank you  
24 again for giving me the opportunity to speak.

25 CHAIR SCHILTZ: All right. Thank you, Mr.

1 Rossbach.

2 Are there any comments or questions by  
3 members of the Committee?

4 (No response.)

5 CHAIR SCHILTZ: Seeing none, we will move  
6 then to Mr. Thomas Sheehan. Mr. Sheehan?

7 MR. SHEEHAN: Can you see me and hear me?

8 CHAIR SCHILTZ: Yes, both.

9 MR. SHEEHAN: Excellent, excellent. As you  
10 stated, my name is Tom Sheehan. I am a lawyer and  
11 actually an epidemiologist as well that for decades  
12 has worked at what I like to call the intersection of  
13 law and science, often in connection with threshold  
14 questions of the admissibility of expert opinions.

15 I'd just like to thank the Committee for the  
16 opportunity to speak with you in support of the  
17 proposed amendments to Rule 702, and I'd also like to  
18 thank the Committee really for all the work that it's  
19 done to address what I consider to be a very important  
20 topic. The work has been noticed, obviously, by  
21 members of the bar, as is evidenced by all the notes  
22 that you've received and all the folks that are  
23 speaking here today, so appreciate all the work that  
24 you've done.

25 Now, as it has been mentioned several times

1 today, Rule 702 was last amended 22 years ago, in  
2 2000, and since that time, there have been numerous  
3 Law Review articles, numerous commentaries published,  
4 and they've recognized that many courts have struggled  
5 to understand and apply the tenets that are embodied  
6 in Rule 702. And, in fact, as the current draft  
7 committee note recognizes, "Many courts have held that  
8 the critical questions of the sufficiency of an  
9 expert's basis and the application of the expert's  
10 methodology are questions of weight and not  
11 admissibility, and these rulings are an incorrect  
12 application of Rule 702 and Rule 104."

13 So the natural question then is, what leads  
14 judges to incorrectly apply Rule 702 on critical  
15 questions regarding the application of the rule and  
16 how it applies to the admissibility of expert  
17 testimony? And if we can answer that question, then,  
18 of course, we've got to consider, what can we do to  
19 help judges properly apply Rule 702?

20 Now regarding the first question, I know  
21 there's been some criticisms of submissions to the  
22 Committee, but I would submit that there is now a  
23 wealth of data and analysis that's been performed by  
24 Professor Capra, by Committee members, by academics,  
25 by front-line members of the bar, and I'm not going to

1 attempt to summarize all those data today or  
2 regurgitate it to you, but I've reviewed it, as I'm  
3 sure the Committee has, and what I take away from it  
4 is an illustration of a number of important issues and  
5 concepts.

6 I think it's recognized that there is a  
7 widespread problem with the application of Rule 702.  
8 Whether you want to say that's a significant minority  
9 of courts or how you want to actually quantify that is  
10 not as important to me. I think there is truly no  
11 dispute that there is widespread misunderstanding  
12 about what the rule requires, and I think that problem  
13 is driven by repeated misstatements in case law of  
14 what Rule 702 is about and what it mandates a judge to  
15 do, and I think that those misstatements evidence a  
16 fundamental misunderstanding of the role of judicial  
17 gate-keeping.

18 So somebody I think earlier said, hey, this  
19 is just basically sour grapes. One side doesn't like  
20 a decision, another side does, and it sort of goes  
21 both ways, so, therefore, don't amend the rule. I  
22 just want to be very clear that the research that has  
23 been done is not sour grapes. It's not cherry-picked  
24 examples where one side substantively disagrees with a  
25 well-reasoned Rule 702 decision.

1                   In fact, I was a co-author of a note  
2 submitted to the Committee that analyzed all recent  
3 MDL decisions over a period of years. I submitted  
4 that to the Committee, and what we found really was  
5 what I would describe as a problem that goes from the  
6 root to the branches, and what I mean by that is MDL  
7 Rule 702 decisions have a ripple effect throughout the  
8 judiciary. They're decided by highly qualified  
9 jurists. And so, when an MDL judge articulates in a  
10 widely read decision, for example, that the factual  
11 basis for an expert's opinion is not a proper gate-  
12 keeping inquiry under Rule 702, that has a tendency to  
13 get some traction. It gets repeated again and again,  
14 and it gets ingrained in the case law.

15                   And I think that highlights the  
16 misunderstanding about the reliability inquiry, that  
17 methodology is just an abstract concept that's only  
18 loosely connected to the underlying facts. And on the  
19 contrary, it is the gate-keeping role to ensure that  
20 all the steps of a purportedly reliable methodology  
21 have been reliably applied to the existing facts and  
22 data.

23                   And this apparent misunderstanding about and  
24 subsequent misapplication of Rule 702 can have wide-  
25 ranging and potentially profound impacts on companies,

1 on doctors, on the practice of medicine, on the  
2 availability of therapeutic options for patients. So  
3 I just want to stress that this is not merely an  
4 academic discussion that we are having today. Rule  
5 702 decisions truly have effects well beyond the  
6 courtroom.

7 So just getting back to my two questions, if  
8 there's a problem that involves a misunderstanding of  
9 Rule 702, which I would submit there clearly appears  
10 to be, what can the Committee do about it? And I  
11 would suggest that amendments can work. Amendments  
12 prompt judges and lawyers to refocus, re-energize,  
13 revisit what they thought they knew, as Mr. Lasker  
14 commented on earlier, and carefully consider what's  
15 the rationale for the underlying changes.

16 Now the proposed amendments, I think, can  
17 fairly be characterized as modest, but I also think  
18 it's fair to say that they will help judges. And, in  
19 fact, as some have suggested, I think it was Lee  
20 Mickus earlier, adding the language "if the court  
21 determines" back into the rule would provide  
22 unambiguous clarity to the steps required to be  
23 undertaken by judges and the judicial gate-keeping  
24 role.

25 And that's really the whole point, right, of

1 any rule change, is to provide clarity for judges, to  
2 underscore that the burden of proof lies with the  
3 proffering party and there is no liberal admission  
4 policy. I think it was Professor Capra that  
5 highlighted that tension before. I won't get into the  
6 distinction between evidence and information. I think  
7 the proposed changes make sense and I think, for the  
8 reasons that Professor Capra indicated, there is  
9 precedent for using the phraseology that has been  
10 submitted.

11 But I think that more importantly, adopting  
12 these changes and adopting an accompanying note that  
13 highlights the rationale for the proposed changes and,  
14 in fact, does highlight where courts have got it wrong  
15 in the past, where there has been that incorrect  
16 application on these critical questions will only  
17 serve to help the judiciary discharge their gate-  
18 keeping role and will help to ensure consistent and  
19 uniform application of Rule 702 across jurisdictions.

20 Thank you very much for your time today, and  
21 I'm happy to address any questions.

22 CHAIR SCHILTZ: All right. Thank you.

23 Are there any questions or comments?

24 (No response.)

25 CHAIR SCHILTZ: All right. We'll turn next

1 then to Mr. Smoger or Smoger.

2 MR. SMOGER: Smoger.

3 CHAIR SCHILTZ: Smoger. Mr. Smoger,  
4 welcome.

5 MR. SMOGER: I assume I can be seen and  
6 heard.

7 CHAIR SCHILTZ: Yes.

8 MR. SMOGER: Thank you. I practice at the  
9 law firm of Smoger & Associates, and I remember -- I  
10 go back too long, I remember Professor Gottesman  
11 arguing Daubert, which actually the plaintiffs won,  
12 which most people forget. I prepared amicus briefs in  
13 both the Kumho Tire and the Joiner cases. I've argued  
14 in different supreme courts the issues of 702, in  
15 state supreme courts, which is one of the things that  
16 I think we have to really consider, the fact that a  
17 large number of states take the 702 rule and adopt it  
18 without the notes or comment. They just take the  
19 rule. So the rule on its face has to say what we mean  
20 it to say in terms of state practice.

21 I myself have tried cases throughout the  
22 nation, probably in more than half the states, where I  
23 actually handled it in more than half the states. And  
24 this court has a difficult job of one size fits all  
25 and extraordinarily different cases to handle this.

1 And I would like to discuss the practice. The real  
2 practice is we start the case with these Daubert  
3 motions, which are a form of in limine motion. I  
4 think it was said by Mr. Mickus that, well, it's not  
5 going to happen unless they're broad.

6 I can tell you in the smallest case almost  
7 every expert has a motion to exclude. This, you know,  
8 goes down to small accident cases, all the way up to  
9 the MDL. It's uniform. There's always that motion.  
10 The motion doesn't end it if it happens. Now we're  
11 led to believe that every time the expert has been  
12 allowed it's been too broad. Every time that the  
13 expert has been struck it's been meticulously stated.  
14 But it's going to happen all the time and it's  
15 consistent. So what do we have? I will tell you we  
16 don't end at the Daubert motion proceeding and this is  
17 all about processing, where I'm going to finish.

18 We start with those motions. Every time we  
19 go to trial, there will be an in-trial motion to  
20 strike the expert again. As soon as we end the  
21 presentation of expert of the case, there will be a  
22 motion for a directed verdict, and that will include  
23 all the Daubert questions a third time. So it's an  
24 ongoing process and an expensive process. I don't  
25 bring -- almost never bring Daubert motions. And

1 you're seeing that this is often the defense side.  
2 Well, the reason for that is what I do, if I bring  
3 them and win, is I create an appellate issue and  
4 almost a guaranteed appellate issue.

5 So I'd be very, very careful if I'm ever  
6 going to do that. And I don't. So that's why we are  
7 seeing so many from one side, because the defense has  
8 the advantage. If they can win their motion, then the  
9 result is the case is over. There's a huge victory in  
10 winning the motions and the experts because then we  
11 can't meet our burden of proof. So they're broad.  
12 There's questions about why this is help for  
13 settlement. This should never be an issue for  
14 settlement. There's a need that cases that certain  
15 experts don't do things right, like they don't look at  
16 an entire MDL file. Well, they can't. It costs a  
17 fortune to give it. You try to do your best to give  
18 them what they will need.

19 I wanted to get to the three cases that have  
20 been talked about. One case is the Loudermill, Smith,  
21 and Viterbo cases. I don't want to really deal with  
22 them, except for the fact that they demonstrate how  
23 out of context and how unique. Let's look at -- if  
24 you look at the really facts of Smith, Smith was about  
25 the fact that -- and it's the only one of the three

1 that was reversed. Smith was about the fact that the  
2 expert should've been an automobile design expert and  
3 the plaintiffs used an electrical engineer and a  
4 mechanical engineer with 40 years' experience and they  
5 both worked for GM, one for 17 years and done accident  
6 reconstruction. And the court said, well, you're not  
7 a process design expert, you're a mechanical design  
8 expert.

9 The Loudermill case was DBCP and was a  
10 toxicologist, and the issue was whether the  
11 toxicologist could testify. Well, the toxicologist  
12 was chief for the regulated substance and sections of  
13 the Southwest Medical Center. He was on the staff in  
14 toxicology. And the only thing he hadn't done was  
15 just DBCP. It was a single injury, liver damage, and  
16 he had 20 years' experience, including consulting with  
17 the EPA on looking at the relationship.

18 So the third one, Viterbo, is just shocking  
19 to me. If you want to put a red flag on something,  
20 that's pesticide tort, okay? Well, the expert was  
21 struck in Viterbo. How do you put a red flag on that?  
22 So let me get to, you know, what I see the real issue  
23 and why we have an issue, and I understand where  
24 Professor Capra chose "evidence" from, but it's not to  
25 look at what happened, it's to question procedurally

1 what we think might happen. And what we think might  
2 happen is that we're going to get hearings that are  
3 asking courts, especially in state court without the  
4 comments, that they have to determine that it's  
5 evidence, that it's admissible evidence before that  
6 can go on to review, that they have to look at it in a  
7 sense.

8           So even though Professor Capra says  
9 admissible or nonadmissible evidence, we are fearful  
10 that courts looking at that will have evidentiary  
11 findings and there will be a separate evidentiary  
12 hearing, which is why we say information, because that  
13 says to the court you can look more broadly. So I  
14 understand why the words were chosen. My fear is the  
15 implication of how those words will be used.

16           That's the same thing with findings, which  
17 is my last point. You've been asked to do findings.  
18 Well, the findings were going to require courts to  
19 have their own sessions and analysis in terms of doing  
20 that, and they're going to be asked to hold hearings  
21 and have findings of fact to get that. So our  
22 question here is really how we envision this process,  
23 and that is the greatest issue of our concern about  
24 putting the word "findings" in and our concern about  
25 using the "evidence." It's not where it came from.

1 It's the implications of how courts, particularly  
2 state courts, will use it. I thank you for your time.

3 CHAIR SCHILTZ: Thank you, Mr. Smoger.  
4 Any questions or comments?

5 JUDGE SCHROEDER: I have one.

6 CHAIR SCHILTZ: Yes, Judge Schroeder?

7 JUDGE SCHROEDER: For Mr. Smoger, Rule 703  
8 refers to facts or data that an expert can rely on  
9 that may not be admissible. Is there any information  
10 in your view that would not be facts or data that  
11 you're worried about with the use of the word  
12 evidence?

13 MR. SMOGER: I'm worried about -- that  
14 depends on putting them together, but evidence is  
15 inconsistent with facts and data, if you look at just  
16 the word evidence.

17 JUDGE SCHROEDER: But my question is a  
18 little more specific and that is Rule 703, the  
19 argument is made -- well, let me back up. The  
20 argument is made that if we use "evidence," we're  
21 inconsistent with 703. So, if I look to 703, it uses  
22 the phrase "facts or data" for what can be relied upon  
23 and it need not be admissible. Given your concern  
24 that you've expressed that there might be some  
25 exclusion of something under the use of the phrase

1 evidence if "preponderance of evidence" is put into  
2 Rule 702, my question is, is there anything in the use  
3 of the phrase "information" that extends beyond facts  
4 or data, as contemplated by 703?

5 MR. SMOGER: We don't believe so. The  
6 question is if you're getting it down to one word and  
7 not repeating 703 within 702, then the search was to  
8 look for a word that would incorporate that. So that  
9 seemed to be the best single choice of the word. But  
10 we don't need to extend it beyond what 703 allows.

11 MR. CAPRA: May I interject that 702 and 703  
12 are doing two different things? 703 is what an expert  
13 can rely upon; 702 is what the judge must find. And  
14 so you wouldn't refer to evidence in 703 at all.  
15 There's no reason. It's not an evidentiary  
16 determination they're making. They're coming up with  
17 an opinion, whereas a judge is looking at all the  
18 evidence, admissible and inadmissible evidence.

19 I guess I'd also say it's weird to say that  
20 the rule that's incorporating 104(a), which itself  
21 says the judge can consider inadmissible evidence,  
22 becomes somehow confusing. But I guess there's been a  
23 lot of that talk today, so it's something that we'll  
24 have to think about.

25 CHAIR SCHILTZ: Judge Schroeder, did you

1 have anything more?

2 MR. SMOGER: No, I thank you and I agree  
3 that if 703 is longer, that's what we're trying to  
4 say. And we're trying to get rid of not having  
5 inconsistency and we just -- I've been before too many  
6 courts that will say that if it's evidence, that I  
7 have to decide admissibility before I make the review.  
8 So I'm trying to avoid that in the rule.

9 CHAIR SCHILTZ: Thank you, Mr. Smoger.

10 Next is Navan Ward. Good morning, sir.

11 MR. WARD: Good morning. My name is Navan  
12 Ward --

13 CHAIR SCHILTZ: You can begin whenever  
14 you're ready.

15 MR. WARD: Okay. Thank you. Again, my name  
16 is Navan Ward, and I am a partner with the law firm of  
17 Beasley Allen, located in our Atlanta, Georgia,  
18 office. For over 20 years, I've had the honor of  
19 representing victims of product liability, trucking  
20 and nursing home claims, as well as defective  
21 pharmaceutical and medical device claims. I'm also  
22 the president of the American Association for Justice,  
23 otherwise known as AAJ, and I am here to speak today  
24 on behalf of AAJ and our members.

25 I do want to thank this Advisory Committee

1 for your time and attention to the matters that have  
2 been discussed today. Having the distinguished  
3 position of being second to last in the order today,  
4 I've had an opportunity to listen to all of the very  
5 insightful presentations throughout this day, and it's  
6 clear that all sides agree that the main issue that  
7 this Advisory Committee must resolve is how to  
8 eliminate or substantially reduce existing and future  
9 confusion or the need to make assumptions by courts,  
10 as well as providing predictability to parties as it  
11 relates to 702.

12 AAJ's recommendations are the most effective  
13 and efficient way to achieve that goal with our  
14 proposed clarifications that will give courts clear  
15 direction on what standards courts should apply.  
16 AAJ's first recommendation is in complete and  
17 consistent agreement with this Advisory Committee's  
18 decision from the spring 2021 meeting where the  
19 conclusion was to remove the language of the courts  
20 demonstrate or the courts find from sentences  
21 regarding preponderance. This Advisory Committee  
22 simply got it right the first time, and, therefore, we  
23 strongly oppose any suggestions to reinsert that  
24 language or similar language, such as "the court  
25 determines," back into the text of this rule for all

1 of the reasons discussed during the last meeting as it  
2 has the unintended potential for causing the court to  
3 view that the court and not the jury must weigh and  
4 decide the correctness of the scientific evidence,  
5 which is -- and will intrude and diminish the role of  
6 the jury.

7           AAJ's next recommendation relates to the  
8 language and text in Rule 702 which says or should say  
9 "preponderance of information" because that's exactly  
10 what the committee note indicates it should say. It  
11 was referenced earlier, but when we go to the very  
12 last paragraph of the committee note, it so clearly  
13 spells out the preponderance of information standard  
14 when it states in sum, "evidence does not mean  
15 evidence, but rather, in 702, evidence means  
16 information." It is extremely important that this  
17 clarification is stated in the actual text of the rule  
18 instead of using a contrary or incorrect phrase of  
19 "preponderance of evidence," not to mention such  
20 explanation should potentially be moved to a more  
21 prominent place in the notes.

22           Now I'd like to highlight that this portion  
23 of the committee notes occurs after and takes into  
24 consideration Rule 104, the rulings in Bourjaily,  
25 other Supreme Court rulings, and still lands on making

1 the point that, again, evidence, as referenced in 702,  
2 is meant to use a preponderance of information  
3 standard.

4 Now this is an opportunity for this Advisory  
5 Committee to make the necessary clarifications on this  
6 issue, which has always been a core function and role  
7 of the Advisory Committee because a reader should  
8 simply not have to take multiple steps to explain this  
9 text by going to notes, other rules, common law, and  
10 other resources when, at the end of the day, the  
11 explanation can simply be written in the actual rule.

12 As a practical matter, this contradiction  
13 will certainly lead to and/or contribute to confusion  
14 by well-meaning courts, as well as parties. And we  
15 already know that there is pre-existing confusion and  
16 mistakes by courts regarding this rule as it's already  
17 a concern that's freely acknowledged within the  
18 committee notes. And by using the preponderance of  
19 evidence text, there will undoubtedly be additional  
20 confusion by courts because, when courts use  
21 incorrectly and interpret that they are required to  
22 decide the merits of expert testimony by a  
23 preponderance of evidence and are bound by the  
24 evidence standard, inconsistent rulings on this issue,  
25 split decisions between circuits, and increased

1       appellate review on the meaning of this rule is sure  
2       to follow.

3               Confusion will also occur when parties  
4       knowingly or unknowingly argue legally incorrect  
5       positions, particularly in states that adopt the  
6       Federal Rules of Evidence but not the notes or  
7       commentary which explain or clarify this particular  
8       rule, which by my calculation would apply to at least  
9       15 states. Misinterpretation on this issue on the  
10      state level will be multiplied several times over if  
11      "preponderance of evidence" is allowed to be in the  
12      text.

13              In a nutshell, AAJ's recommendations provide  
14      this Committee a direct way to allow 702 to simply  
15      mean what it says by saying what it means in the  
16      actual text of the rule. Thousands of my plaintiff  
17      trial lawyer colleagues around the country also  
18      represent victims in a variety of other claims, and a  
19      common thread to each of our victims' cases is that we  
20      need experts to prove their claims, and uncertainty in  
21      Rule 702 could be devastating to a plaintiff when  
22      misapplied, resulting in the exclusion of our experts  
23      and, thus, exclusion of our claims, while the converse  
24      for the defense does not bring such an equivalent  
25      result. Therefore, it is extremely imperative that

1 any and all ambiguity is removed from the court's  
2 analysis in such an important rule by using the  
3 preponderance of information standard. Thank you.  
4 And I'd be happy to answer any questions.

5 CHAIR SCHILTZ: Thank you, Mr. Ward.

6 Are there any questions or comments from the  
7 Committee?

8 (No response.)

9 CHAIR SCHILTZ: All right. Thank you again.

10 And our last speaker today is Mr. Warshauer.  
11 Mr. Warshauer, welcome.

12 MR. WARSHAUER: Thank you. Good afternoon.  
13 My name is indeed Michael Warshauer. For 38 years, as  
14 a small firm lawyer, I've represented plaintiffs in  
15 individual product liability, motor vehicle and truck,  
16 and malpractice actions. My experience with 702  
17 motions is extensive as I was lead counsel for the  
18 plaintiff in General Electric Company v. Joiner. I've  
19 briefed and argued motions relating to the admission  
20 of expert testimony hundreds of times in multiple  
21 states, in multiple federal courts and multiple  
22 circuits at both the trial and appellate levels.

23 Some of these cases have involved huge  
24 amounts of compensation at risk and damages to be paid  
25 by the defendant, whereas others were quite modest.

1 Dealing with Rule 702 standards is often the most  
2 expensive and time-consuming aspect of the entire  
3 litigation process. Indeed, virtually every expert is  
4 challenged, increasing the cost to the plaintiff and  
5 the burden on the trial court.

6 I will remind the committee that the goal of  
7 the Federal Rules of Evidence is not to reduce trial  
8 dockets or protect defendants from having to answer  
9 for their wrongful conduct, not at all. The goal  
10 should be to ensure that the promise of the Seventh  
11 Amendment is kept for all Americans and administered  
12 fairly to litigants in MDLs, as well as those involved  
13 in run-of-the-mill truck wrecks.

14 Not one of the proponents for amending Rule  
15 702 in a manner that will encourage judges to encroach  
16 on the duty of juries has mentioned this sacred aspect  
17 of our Constitution, the Seventh Amendment, not one.  
18 Instead, they've talked about eliminating trials  
19 through motion practice and amending Rule 702 to have  
20 the trial judge become the finder of fact with respect  
21 to expert testimony. They want a fence instead of a  
22 gate.

23 So let me remind this Committee what our  
24 Seventh Amendment demands: in suits at common law,  
25 where the value in controversy shall exceed \$20, the

1 right to trial by jury shall be preserved. Simply  
2 put, our Constitution requires that facts be decided  
3 by juries and not judges. Our Constitution presumes  
4 that a jury of citizens is better than a single judge  
5 at deciding facts.

6 Inclusion of the phrase "by a preponderance  
7 of the evidence" or anything that encourages judges to  
8 make findings of fact will likely remove the jury from  
9 the job of being the fact-finder by encouraging trial  
10 courts to do that job for them. While I don't think  
11 any change is needed, I think we're finally getting a  
12 body of jurisprudence and appellate decisions that are  
13 giving everybody guidance after 25 years. If there  
14 must be change, the preponderance of language should  
15 read "preponderance of the available information."

16 It's an important distinction because the  
17 preponderance of the evidence is connected with fact-  
18 finding and a weighing of evidence, historically, a  
19 job for the jury. Its common connection in the  
20 vernacular to fact-finding cannot be overlooked or  
21 ignored. It also implies that Rule 703, as we've  
22 talked about in the last few speakers, that allows  
23 expert testimony to be based on information that is  
24 not admissible evidence shouldn't be considered. It's  
25 no longer valid, in fact. "Preponderance of the

1 available information" is a phrase that encourages the  
2 trial judge to be a gatekeeper, not a fact-finder.

3 Professor Capra, your distinction between  
4 702 and 703 is fine from your role as an evidence  
5 professor, and I'm sure your students will get it  
6 right in their exams, but I recommend to you as  
7 members of this Committee that our run-of-the-mill  
8 trial judges and our run-of-the-mill practitioners  
9 will not see it that way. They will read 702, if it  
10 includes the phrase "preponderance of the evidence,"  
11 exactly what that requires, the trial judge to do what  
12 that phrase means and make findings of fact and become  
13 the fact-finder, in violation of the Constitution and  
14 really in violation of the intent of what I believe  
15 the Committee is.

16 I also wanted to comment that the data upon  
17 which the proponents for change rely is hand-selected  
18 and misleading. First, it assumes that the admission  
19 of any evidence they disagree with is wrong. Every  
20 opinion they point to -- court of appeals' opinions,  
21 they were wrong. Well, that's not surprising. Every  
22 litigant is disappointed when a position they champion  
23 is not accepted, but that does not mean the opinion is  
24 wrong.

25 These proponents go so far as to claim that

1 when a trial court fails to mention the word  
2 "preponderance," they're presumably wrong. That makes  
3 no sense at all and, if true, many of the Rule 702  
4 opinions altered by members of this Committee, because  
5 I checked last night, are automatically wrong because  
6 they didn't include the word "preponderance." That's  
7 certainly not the case.

8 Other data they rely on shows a failure to  
9 note the failure rate of well under a half of a  
10 percentage. Well, that's pretty good. We're not  
11 going to change that failure rate by changing the  
12 words. The proponents have testified over and over  
13 today that they get to decide the standards upon which  
14 testimony offered against them should be measured.

15 Members of this Committee, foxes should not  
16 be allowed to set the standard for the counting of  
17 chickens, and corporate wrongdoers should not be  
18 allowed to set the standards by which they are held  
19 accountable either. Keep in mind that the admission  
20 of evidence -- and this is what we learned in  
21 Joiner -- it's a discretion. It's always going to be  
22 things that people don't agree with. The courts are  
23 always going to be exercising their discretion, and  
24 there will always be differences. And changings of  
25 the rules' language that might have unintended

1 consequences isn't going to change that. The  
2 defendants and plaintiffs are always going to be  
3 unhappy occasionally.

4 Second and most importantly, the data fails  
5 completely to consider all the judge cases that were  
6 ended by judges who misapplied or overly aggressively  
7 applied Rule 702 by improperly excluding expert  
8 testimony. That data is very hard to find. These  
9 cases are underrepresented and hard to count because,  
10 given the standard of review, abuse of discretion, we  
11 realize it's often a waste of time to appeal the  
12 decision, and appeals are, therefore, often not  
13 pursued.

14 Simply put, an exclusion ends a case with no  
15 realistic remedy for the plaintiff. The case is  
16 simply over. In contrast, when a court allows an  
17 expert to testify after performing its gate-keeping  
18 function, there are multiple opportunities for that  
19 decision to be revisited, multiple opportunities at  
20 the end of the expert's testimony, the end of  
21 plaintiff's case, at the end of the trial, at a motion  
22 for a new trial, and at multiple levels of appeal.  
23 So, to the extent the proposal I suggest, the  
24 preponderance of all of the available evidence, might  
25 occasionally allow for a jury trial that perhaps

1 should not have occurred, isn't it better to err on  
2 the side of the Constitution by allowing the jury to  
3 decide which expert is right, an action that has  
4 multiple opportunities to be corrected.

5           This idea that the judge is to consider all  
6 available information and not weigh evidence as a  
7 fact-finder cannot be hidden in the comments. As  
8 pointed out by multiple speakers, too many states,  
9 including my own, Georgia, do not adopt the notes when  
10 they adopt the Federal Rules of Evidence. So, if the  
11 phrase "preponderance of the evidence" is included, as  
12 opposed to the phrase "preponderance of the  
13 information," the result will be that these state  
14 court judges will read this rule as requiring them to  
15 do that which they should not, weigh competing expert  
16 testimony, choose a winner, and then grant summary  
17 judgment if the winner turns out to be the defendant.

18           This potential permission cannot be  
19 overlooked as an unintended consequence of the  
20 proposed change but can be minimized by using the  
21 phrase "preponderance of the available information."  
22 I thank you for the opportunity to present my thoughts  
23 to you today.

24           CHAIR SCHILTZ: Thank you, Mr. Warshauer.

25           Are there any comments or questions from the

1 Committee?

2 (No response.)

3 CHAIR SCHILTZ: All right. Thank you.

4 At this point, I think we have heard from  
5 all the scheduled speakers. I want to thank all of  
6 those who did testify today. We're a small committee.  
7 We're just a committee of nine people when we're at  
8 full strength, and, thus, we particularly value  
9 getting the insights of a broad range of  
10 practitioners. The Committee members will give  
11 careful consideration to all of the comments, written  
12 and oral, and, again, we thank you very much for  
13 taking the time to help us with our work today.

14 This hearing is adjourned.

15 (Whereupon, at 12:20 p.m., the public  
16 hearing in the above-entitled matter adjourned.)

CERTIFICATE

DOCKET NO.: N/A  
CASE TITLE: Public Hearing on Proposed Amendments  
to the Federal Rules of Evidence 106,  
615, and 702  
HEARING DATE: January 21, 2022  
LOCATION: Washington, D.C.

I hereby certify that the proceedings and  
evidence are contained fully and accurately on the  
tapes and notes reported by me at the hearing in the  
above case before the Administrative Office of the  
U.S. Courts.

Date: January 21, 2022
